New map of
TARANGIRE
National Park
DRY SEASON
Main Dry Season: early June till the end of October
Best period to spot wildlife, all migrating animals are back in the Park and plenty of wildlife can be easily observed around the Tarangire River. Many tsetse flies are also present, but do not carry sleeping sickness. July and August early mornings can be relatively cold. In general, the visitor can expect cloudy mornings and warmer afternoons.
Short Dry Season: early January till the end of March
Birth of wildebeest and zebra calves. At the end of the Short Dry Season the bulk of the migration slowly starts to move towards the North. Cloudy and humid weather.
to MAKUYUNI CROSS: 25,1 Km (VERY GOOD TARMAC ROAD)
