Fall 2008

Invasive Aquatic Plants: What You Can Do!

In recent years, Milfoil and other invasive aquatic plants have been a targeted concern by many organizations involved in the preservation of Maine lakes. Through the efforts of dedicated volunteers, property owners and various organizations, many lakes have successfully avoided the threat presented by these plants. However, with continued success of such efforts, it is not uncommon for individuals and organizations to become complacent.

Maine's Most Wanted

**Brazilian Elodea
Curly-leaved Pondweed
European Frogbit
European Naiad
Eurasian Milfoil
Fanwort
Hydrilla
Parrot Feather
Variable-leaf Milfoil
Water Chestnut
Yellow Floating Heart**

The Maine DEP currently identifies eleven banned invasive aquatic plants. These plants, whether native or non-native to Maine, have been identified to be harmful to the existing plant and animal life found in a body of water. If introduced and allowed to spread, these plants can devastate a body of water, drastically changing its composition and ultimately impacting all aspects of recreation found on the lake.

As a property owner, you have a vested interest in ensuring that Cold Stream Pond remains free of these threats. Prevention is the best defense!

Simple Ways You Can Help

- **Familiarize yourself with the named plants:** Many organizations, such as the Maine DEP and the Volunteer Lake Monitoring Program, provide detailed descriptions and pictures that are easily accessed on their websites. For more information visit www.maine.gov/dep or www.mainevolunteerlakemonitors.org
- **Take precautions when transporting your watercraft between bodies of water:** Inspect and rinse your watercraft and motor, removing any vegetation found before launching into any lake or stream.
- **Monitor your shoreline and water conditions:** Know what is normal for your property and shoreline; quickly report any unusual changes in vegetation, water quality, or animal life.
- **Stay informed:** Many organizations publish regular newsletters that often include articles including regular updates about water conditions. See back page for a recommended list.
- **Be an active member of your lake association:** The Cold Stream Campowners Association is actively involved in protecting our lake. By supporting the organization, you are helping protect the lake.
- **Share your knowledge:** Cold Stream Pond is used by many visitors throughout the year. Make sure your family and friends, using the lake for recreational purposes, are aware of the potential hazard these plants pose and are aware of how to inspect their watercraft.

BOARD BRIEFS

The Board of Directors of the Cold Stream Campowners Association meets quarterly to discuss issues and ideas which promote the protection and preservation of Cold Stream Pond. Since the topics are of interest to us all, it is important that everyone stay informed regarding issues discussed during these meetings. To help with this, "Board Briefs" is being introduced as a regular article in our newsletters. In this section, our secretary, Ellen Woolley, will provide a brief summary of topics and issues which may be of particular interest to everyone.

Water Quality Grant – A \$1500 grant is awarded each year for the purpose of funding a project which directly improves water quality in Cold Stream Pond. The Grant Committee is composed of Board Members, personnel from the Department of Environmental Protection, Soil and Water Conservation Department, and Town's Code Enforcement Officer. This year's grant was awarded to the Lower Webb Cove Road Association for a culvert replacement and ditching to prevent erosion into the pond.

Administrative Assistant Hire – The Board unanimously hired Rene Lindsay as our new Administrative Assistant. Rene's duties will include compiling the newsletter, maintaining and updating records, and other administrative duties. Rene's efficiency and dedication has already made a positive impact on our organization.

Finances – In these economic times, the issue of fiscal responsibility has been prominent in Board discussions. Membership drives, a small dues increase, limitation of mailings, comparison of printing costs, scrutiny of interest bearing accounts, have all been decisions made by the Board. After the November issues of the newsletter, it will only be mailed to CSCOA members. Other interested campowners may access the newsletter on the website. The annual food drive and merchandise sales continue to be excellent fund-raisers for the Association. Membership promotions continue in an effort to increase our budget through dues monies.

Lake Preservation – The Association continues its membership in COLA and VLMP. Both of these organizations assist campowners in strategies which preserve water quality. We are pleased to report that Cold Stream Pond water quality continues to be excellent and is closely monitored with the assistance of these worthwhile organizations. When dealing with winter maintenance, culvert repair, etc. it is the commitment of the CSCOA to use best practices in engineering and soil conservation with lake preservation paramount when undertaking all projects.

President's Report

The Board of Directors has met once since the annual meeting and I have spent a lot of time helping with the transition between the past and how we are now trying to do most of the tasks Julie Nadeau previously completed. So far it seems to be working well. Rene Lindsay has proven to be an invaluable assistant and is constantly looking for ways to streamline our book-keeping and administrative functions. Connie Rand of Rand Advertising has been updating the website with new information and purging some past invalid links. Four new directors volunteered at the annual meeting to serve on our Board and they have definitely helped by offering new opinions and insight into our activities.

Lynn Greenleaf and Rene have also developed a new system for dealing with our inventory items. As we previously reported, T-shirts, sweat shirts, afghans and other items will no longer be available on-line. For small orders, items can be purchased three times per year: at the bake sale, at the annual meeting and on the Friday and Saturday after Thanksgiving at my office (108 Abbott Drive) between 9AM and 12 Noon. Lynn and I also agreed to take and ship special orders if the total cost (exclusive of shipping) exceeds \$100.

I'd also like to thank Tom Quirk for generously donating his time, ink and paper to print off 500 color copies of our Association brochure which was created by Christine Weymouth. A copy was included with this newsletter for your review and we hope you will give them out to non-members. We realize the donated copies are not top of the line print quality. But we felt our members could use them to help get some new members. In the future, we hope to send professionally printed brochures in a welcome basket to everyone buying property on the lake.

We are also considering having Rene Lindsay update the Association Map. However, due to our lack of new members and the resultant budget issues, the Board is not sure if we should take on the cost of making new maps. We still have over 100 copies of the 2005 version which indicates there has not been a great demand except for the free copies to the members. If you would like a free copy of the 2005 map, please come by my office on the Friday or Saturday after Thanksgiving.

As a final note, I'd like to ask all people who live on the lake to make some effort to maintain the ditches and culverts on the other side of the road from your property. Even if you are not able to do so yourselves, most people have someone doing odd jobs around their camps. The ditches should be mowed a few times per year, culverts need to be cleaned out to prevent freezing and the entrances to diversion dikes or ditches need to be cleaned out to allow new water and sediment to get into the ditches instead of running down the roads. These tasks just can't all be handled by the road associations and contact people. It is up to all of us to protect our lake for the generations to come. Have a great holiday season and we'll see you next year.

Energy Saving Tip

Install a dryer vent recycler. This inexpensive and easy to install unit will allow all that warm air generated when drying your clothes to remain in your home. Models, such as the "Heat Keeper" by Dundas Jafine, are available at your local hardware store or online at www.amazon.com.

NOTE: For ELECTRIC clothes dryers only.

Fisheries Report

By Nels Kramer, Fisheries Biologist

As some of you may have noticed, repairs on the outlet dam have been ongoing this summer. The dam gate was replaced earlier this summer and in September the riprap on the south bank was completed. It was a spectacular job done on the south bank riprap care of King Brothers!

The second phase of the dam project is presently underway and includes clearing and gravel on the old tote path across Vaughn Cole's property, riprap between the dam and fishway and east approximately 20'. This project should add many years to the life of the dam. Vaughn Cole should be given a ton of credit for the progress of this dam rebuilding project! Without his unflappable demeanor we wouldn't have been able to accomplish this project.

The fishway aspect of the project is still in the design phase. It is not as simple as it may sound to design a fishway that will pass salmon and brook trout, but not northern pike. The fishway is still blocked to all fish passage and we hope to move forward with installation of the new fishway exclusion device soon.

Presently, there are fishway barriers excluding pike at the Howland Dam on

the Piscataquis River and at the West Enfield Dam on the Penobscot River. This may not always be the case, however. The agreement with the Penobscot River Trust specifies that the so called "Howland Bypass" will not have any trap and sort facility, which is probably the most controversial aspect of the agreement to remove the three dams in the Penobscot Drainage. Without a bypass trap and sort facility, pike and other aquatic invasive species will be able to move throughout the Piscataquis Drainage, and most likely into the upper Penobscot Drainage. Stay tuned!

Size and condition of landlocked salmon continues to improve at Cold Stream Pond. We will be setting our trapnets at Cold Stream the week of October 20th and also hope to deploy the electro-fishing boat this fall. I will report on the trapnetting results in the spring newsletter.

NEWS On The Lake

Food Sale 2008

The Board of Directors would like to thank everyone who volunteered their time and/or goodies to this year's food sale. As always, all the homemade goodies were a big hit. Pies and breads seem to be the hot items, so we are hoping to collect more of them for next year's sale.

Thank you to the Town of Enfield and the Senior Center for donating the space. Hope to see you next year!

Trash Pick-up Reminder

One easy way that we can all contribute to keeping our lake and the surrounding area beautiful is to practice good trash maintenance. In addition to making sure that all trash is disposed of in a proper receptacle, it is also important to ensure that trash is properly placed out for pickup on the appointed days. Trash that is inappropriately placed out by the roadside can be as damaging to our area as trash that is carelessly thrown onto the ground.

As a reminder, please follow these simple guidelines:

- **NO PLASTIC BAGS!** All trash bags should only be placed in **plastic** trash containers. Plastic bags left out are easily accessed by animals and will result trash being spread.
- For easy handling, please don't use containers larger than 33 gallons.
- Please do not over stuff the containers. If the lid doesn't fit securely then the local critters can again gain easy access to the contents inside.
- Trash pick-up is on Monday; please refrain from putting trash out prior to Sunday evening.

TAKE PRIDE IN YOUR CAMP ROAD!

Erosion Control

Following a motion made at the annual meeting to be more concerned with erosion, two check dams were built on the uphill side of Abbott Drive. This dam and rip rap were installed by Mathew Murphy of Cook Land Services. Photo courtesy of Dave Cook.

Thank You Julie!

We would like to extend a warm thank you to Julie Nadeau for all her years of hard work and dedication to our Association. For many years, Julie has been actively involved in all aspects of the Association and has been instrumental in our development as we grew. Though she has decided it is time for her to pursue new interest, her contributions to our organization will not be forgotten.

Brook Trout

All you anglers out there will be happy to know that, on June 17, 2008, the lake was stocked with Brook Trout.

The trout were deposited into the lake just in front of Steve and Lynn Greenleaf's home. Lucky enough to have a front row seat for the occasion, Steve snapped these photos of the Cobb Hatchery employees while they were hard at work.

Inventory Sales

As a reminder, Cold Stream Pond Association merchandise is now only available for purchase three (3) times per year. It will be available at both the Annual Food Sale and the Annual Meeting. In addition, it will be available for sale on the Friday and Saturday following Thanksgiving at Dave Cook's office located at 108 Abbott Drive.

Judging Ice Thickness
The American Pulpwood Association
provides the following guidelines to help
gauge the conditions of lake ice.

Ice Thickness (in inches)	Permissible Load (clear, blue lake ice)
2	One person on foot
3	Group of people walking single file
7.5	Passenger Car (2 ton gross)
8	Light truck (2 1/2 ton gross)
10	Medium truck (3 1/2 ton gross)
12	Heavy truck (7-8 ton gross)
15	Heavy truck (10 ton gross)
20	25 tons
25	45 tons
30	70 tons
36	110 tons

Special Note: The Maine DEP recommends at least 5" of ice before it is safe to operate a snowmobile or ATV on it.

COLD STREAM POND
WINTER 2009 ICE FISHING REGULATIONS

- Open January 1st
- Daily Bag Limit on Salmon – 1 fish
Minimum Length Limit on Salmon – 14 inches
- Daily Bag Limit on Lake Trout (Togue) – 5 fish
Minimum Length Limit on Lake Trout – 14 inches
- Daily Bag Limit on Brook Trout – 2 fish
Minimum Length Limit on Brook Trout – 6 inches
- 8 Fish aggregate (1 salmon, 5 lake trout, 2 brook trout).
- Closed to night fishing (from ½ hour after sunset to ½ hour before sunrise)
- It is illegal to dump unused baitfish into any water body.
- It is illegal to deposit any meat, bones, dead fish or other food material for the purpose of luring fish.
- It is illegal to place any ice shack on the lake more than 3 days before the season opens (December 29th)
- All ice shacks will be removed from the parking lot by the 15th of April. Those that remain will be destroyed or sold at the discretion of the Town of Enfield.

****Special Note: COLD STREAM POND is NOT open to night fishing.**

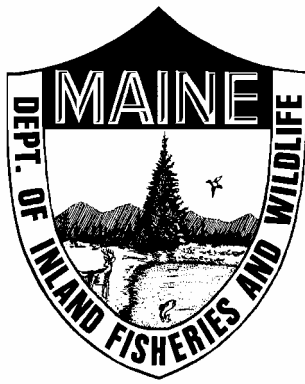

The Lake: Water and Ice

Many of us consider the skimming over of a lake as the first sign that the winter season is upon us. Ice fishing, skating and snowmobiling are all popular winter activities many of us enjoy once a lake has taken its frozen form. However, the importance of the freezing process goes far beyond just the recreational pleasure it provides. The process of cooling and freezing is an important step in the life cycle of the lake's water.

During the summer season, the upper layer of water is considerably warmer than what is found at its lower depths. Since warmer water is lighter, it actually "floats" on the colder water. Swimmers can easily feel this difference when diving from the surface to the bottom, even in relatively shallow areas a difference can be felt. Though the warmer water is rich in oxygen, most of the minerals found in a lake reside in the deeper, cooler water. In order for these important nutrients to reach the surface and the oxygen rich water to reach the bottom, the water must somehow be mixed; this is where the formation of ice comes into play.

As the air becomes progressively cooler, so does the surface water. Eventually, the surface water cools to that temperature of the deeper water; when this happens, the two begin to mix and result in the nutrients and oxygen being distributed throughout the water. After this occurs, the surface water continues to cool and begins to freeze; during the winter, the bottom water is actually warmer than the surface. The ice floats and eventually thickens enough to support those winter activities that we are all so fond of.

In the spring, this process is reversed. As the ice begins to melt and the surface water warms, the two layers again mix. Eventually, the cooler water once again sinks to the bottom and the warmer surface water floats at the top for our swimming pleasure.

The Other Grouse!

Here in Maine we are all very familiar with the ruffed grouse. But Maine is also home to its smaller cousin, the spruce grouse. Spruce grouse are associated with the boreal forests of Alaska, Canada, and the northern border states. Though they prefer the conifer dominated boreal forests, spruce grouse are also closely associated with low-lying coniferous wetlands and bog edges. Spruce grouse are a medium-sized dark-colored bird. Males are dark, slightly larger than females with a black throat and breast, and the characteristic red comb over the eye. The tail is black with a chestnut-colored band along the edge. Females are generally more mottled gray-brown with white

barrings on the under-parts which allows for concealment during nesting. In fact, spruce grouse rely heavily on camouflage and will often stay still when approached within a few feet. This type of behavior has earned the nickname "fool hen".

Like their cousin, male's springtime courtship behavior includes "log drumming", but also features strutting, tail-spreading, and periodic flights with exaggerated wing beats. Nests are usually a well-

concealed depression on the ground in brush or adjacent to a tree trunk or stump. Incubation lasts for three weeks, and clutch size ranges from 4-10 eggs that hatch in late May to early June. After hatching, the hen "broods" their chicks all night and leads them to feeding sites during the day. Mortality is highest for chicks in the two weeks after hatching and is primarily due to predation although exposure does contribute to some mortality. Chicks remain in broods for 70 to 100 days at which time they begin to disperse. Males begin to disperse before females.

This bird, listed as non-game here in Maine forages on the ground and in trees. During warmer months they feed on a variety of berries, green plants, insects, and mushrooms. In winter, they rely almost exclusively on conifer needles. The bird's crop can store up to 10% of its body weight in food, to be digested at night.

So keep a look out for these birds we call fool hens while you are out and about the woods this winter.

A Tribute to "Mr. Charles"

by Shannon Hall

If you knew our neighbor, Charlie Dolan, you know that Cold Stream Pond and our community will not be the same without him. The children next door called him "Mr. Charles". He was a tall, strong, and handsome man; a real gentleman who was loved dearly by all who knew him.

He and Marilyn have owned their camp on Cedar Rest road since 1951. There they would spend their summers with their four daughters Janiffer, Becky, Melanie, & Caroline. They lived in Lincoln until they moved to the lake to live year round, and have resided here for 16 years, being the best neighbors anyone could possibly ask for!

Mr. Charles was known to get up very early and go for his daily swim in the lake, sometimes very late in the season. I will miss seeing and hearing him do this. Some of you would often join him for breakfast & coffee at the 95'er. He also enjoyed dinner at Little Peters.

Everyone knew Charles through community events. He was a Director of the Campowners Association for 8 years. He was also known through the Ammadast Grange Hall, where he was known for his delicious "Cracker Fudge". He also loved socializing at the jam sessions, and helping out with the popcorn.

Later in life, Charlie pursued his passion for gardening by volunteering his time at Pelletier's Greenhouse. Mr. Charles was a great gardener! He also loved to feed the birds, listen to the loons and enjoyed the company of Mrs. Beasley.

Wherever you would run into him at the town office, post office, or at the local Hannaford he would stop & chat. This often delayed his gardening time, haha. "That's all right", Marilyn would say "he has to stop and talk to everyone", "that's Charles"!

Mr. Charles will be remembered to us all, as the gardener next door with the huge heart, at times, being a father figure to me and a grandfather to my children. I loved talking to him, especially when it came to gardening. I will miss seeing him every day, in every season. As I can picture him in his big green bug netting in spring, in the lake on early summer mornings, in the garden in the hot afternoon sun, raking the leaves in the fall and being the quiet, handsome, white haired neighbor he was in the winter. We will miss your peanut butter fudge, your beautifully potted plants and you working next to us in your garden.

Mr. Charles fell asleep in death peacefully on August 6th, "here at home, on the lake" with Marilyn and his four beautiful girls & Mrs. Beasley by his side.

You would have never known he was fighting cancer because he was always positive, upbeat and cheerful. And, always willing to help out his neighbors even then! He was a special neighbor to all of us. He was our "Mr. Charles"

**WE ALL LOVE & MISS YOU DEARLY.
YOU WILL BE IN OUR HEARTS & MEMORIES
FOREVER.
Brian, Shannon, Lily, Mayzie & Innora Hall**

INVENTORY ITEMS AVAILABLE:

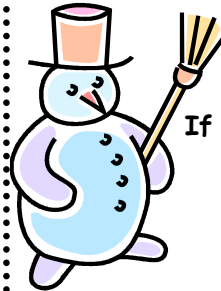

T-shirts, Sweatshirts, Hats, Afghans, 2005 Maps

Items will be available on the Friday and Saturday following Thanksgiving at Dave Cook's Office, 108 Abbott Drive from 9 AM – Noon. Items are also available at the Annual Food Sale and Annual Meeting.

GET INVOLVED:

Volunteers are always welcome! Please contact any of the Board Members to see how you can help out.

Ideas, articles, pictures, etc. are always needed for the newsletters. If you would like to contribute please email Rene at rtlindsav@midmaine.com.

Winter Tip

If you break through the ice:

- Don't Panic!
- Don't try to climb out; you'll just continue to break the ice again.
- Lay both arms flat on unbroken ice and kick hard. Once you are lifted onto solid ice, ROLL to safety.

IMPORTANT REMINDER

This issue is the last newsletter that will be sent to all property owners. In order to receive future issues, you must be an active member of the Cold Stream Campowners Association.

To renew or join, please complete the following:
