

POWERING THE HIGH STREET SUSTAINABLY

Top energy-saving tips for small businesses

HEATING, VENTILATION AND AIR CONDITIONING

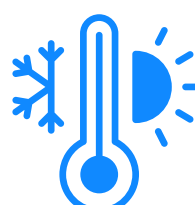

Install **THERMOSTATS** to vary the temperature according to which rooms need it the most (e.g. warm up waiting rooms, cool down store rooms).

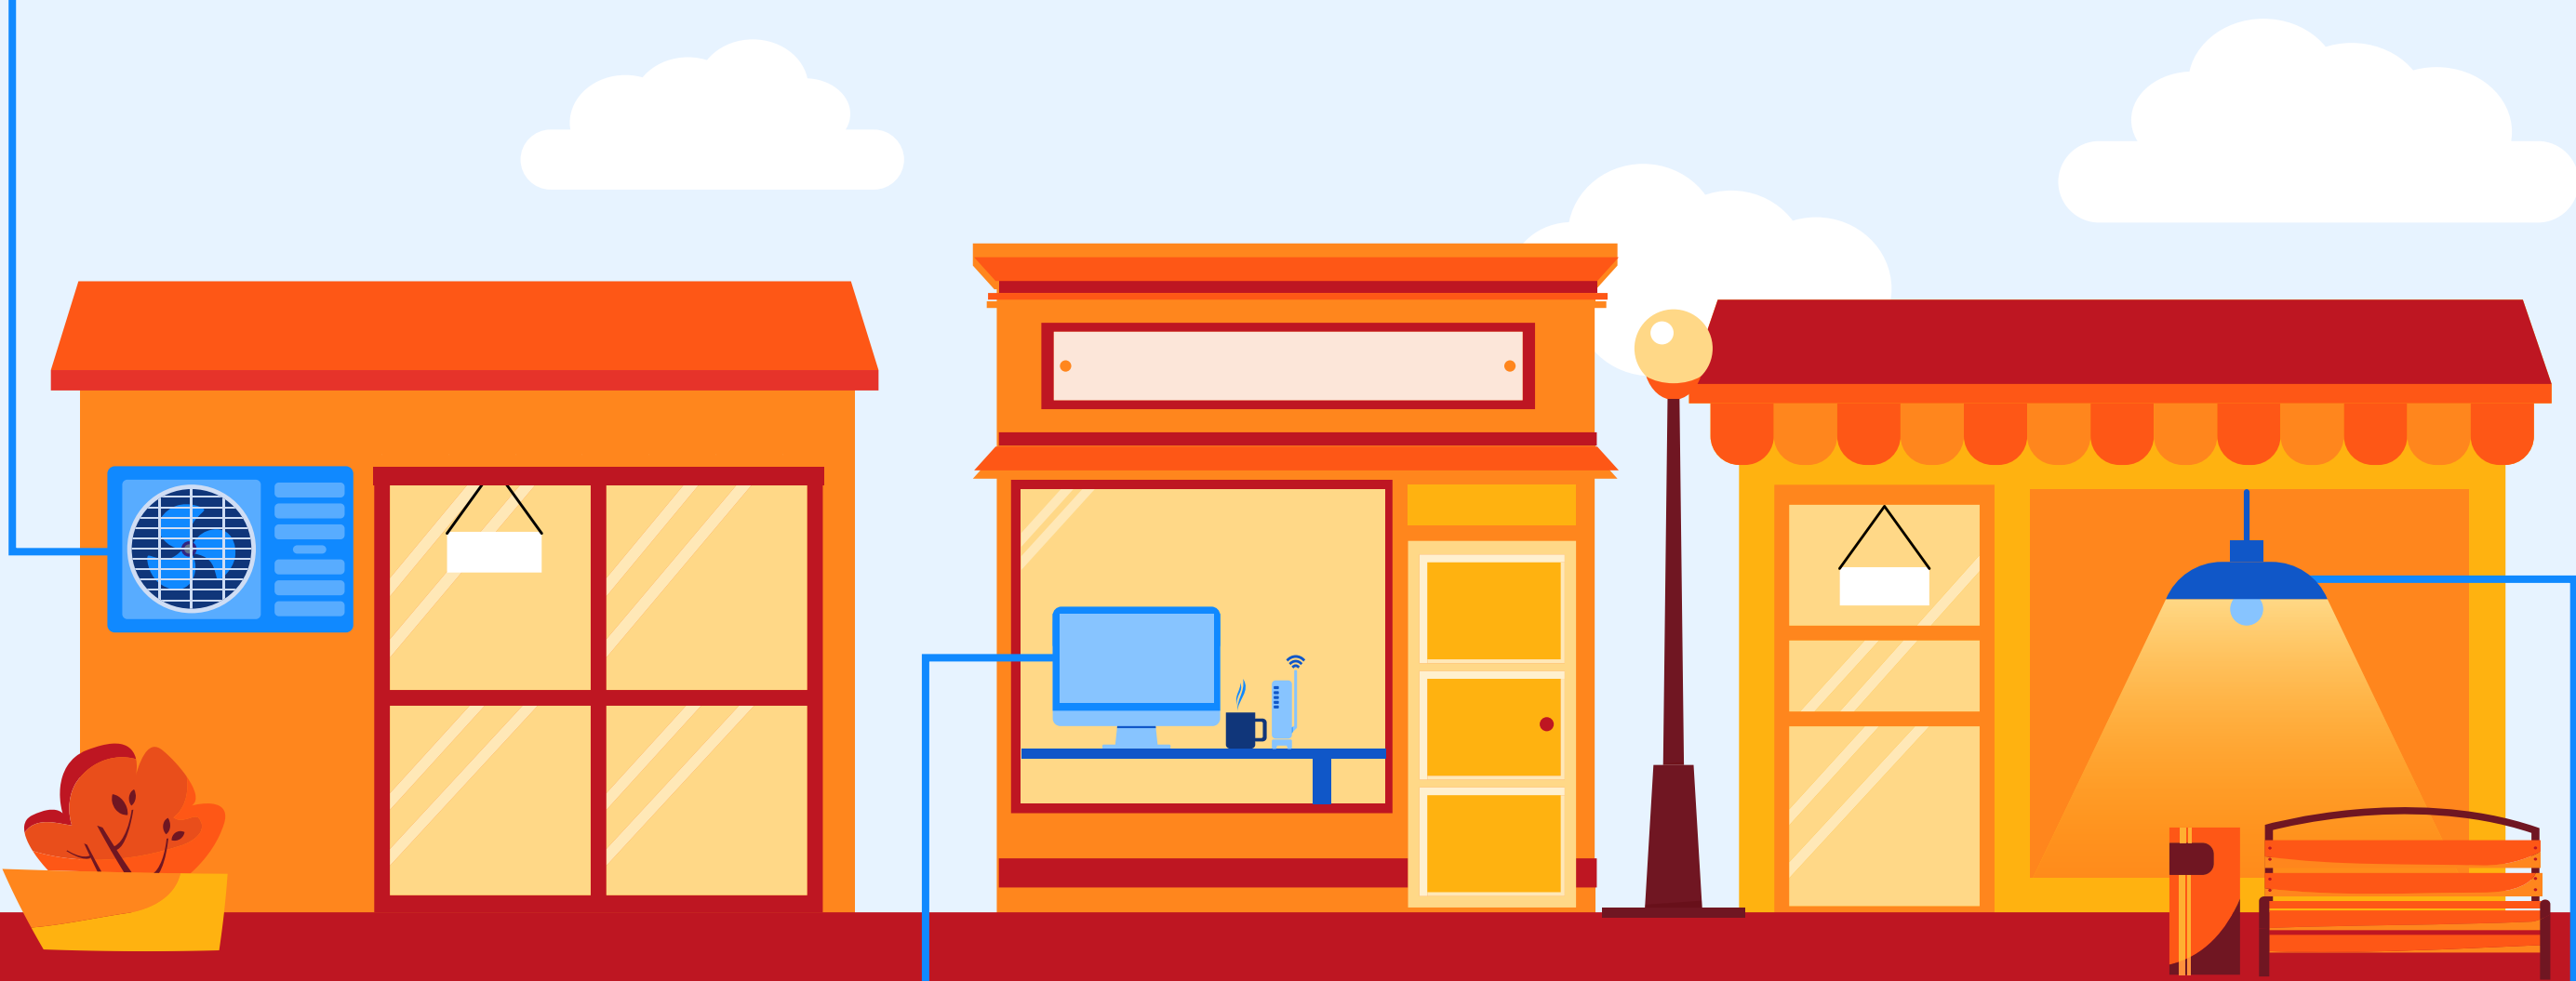

Upgrade the seals of **WINDOWS AND DOORS** in communal areas to minimise draughts.

Programme **TIMERS** to turn the heating down outside peak hours.

Remind your team to **turn off the HEATING or air con** when it's not needed.

IT EQUIPMENT AND APPLIANCES

Power **DOWN** devices when they're not in use.

When upgrading your computers, consider that **laptops are more ENERGY EFFICIENT** than desktops.

TURN OFF non-essential equipment, like display fridge lights and coffee machines, at the end of the day.

Keep your fridges and freezers efficient by **CLEANING filters regularly** and ensuring they have enough space to prevent overheating.

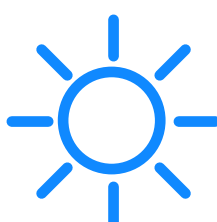

LIGHTING

Encourage everyone to **turn OFF the lights** when rooms are empty.

Got any old-style or halogen bulbs? Switch to more **ENERGY-EFFICIENT LED bulbs and light strips**.

Use **NATURAL lighting** whenever possible - and turn off signs when not in use.

INSTALL motion sensor lights to make sure lights turn off when they're not in use.

Clearly **LABEL light switches and appliances** so employees use only the necessary lights and equipment.

ENERGY IS EVERYONE'S RESPONSIBILITY
