

# Home Solutions for Residential Ventilation

## Product Presentation

# WHY YOU SHOULD CHOOSE SAVE

The Eurovent certified and ErP (1253:2014, 1254:2014) compliant SAVE series offers a wide range of residential air handling units that suit specific needs.

## High efficiency, low energy consumption and SFP

SAVE provides high efficiency and low energy consumption units with low Specific Fan Power (SFP), certified by the Eurovent programme for residential property according to EN 13141-7:2010. SAVE's fan motors utilise modern EC technology and are energy efficient. EC motors reduce energy consumption for transportation of ventilation air by approximately 50% compared to traditional AC motors. SAVE's fan motors are also quiet, flexible and reliable.

## Suitable for a variety of project

All units are perfectly designed for both new buildings and renovation projects.

## Modern design

The SAVE series also consists of units with a new, fresh look that is suitable for any environment.

## Easy to control

SAVE units come with new controls featuring a user-friendly colour touch display with easy start-up.

## Plug & Play

All units are delivered pre-programmed, tested and ready for installation. The units ensure simple service and maintenance, with easy-to-reach replacement components contributing to reliable operation.

## We take our environmental responsibility seriously

Eurovent examines air conditioning and ventilation products' energy efficiency and performance. The Eurovent certificate is proof of high quality and performance of the product in accordance with specified design. All Systemair residential units are Eurovent-certified.

EC technology is straightforward and ecologically effective, with no compromises in quality or functionality. All SAVE units are equipped with energy-efficient fan motors with modern EC technology.

EU's Ecodesign Directive aims to reduce the environmental impact of products, including the energy consumption during the entire product life cycle. As a European manufacturer of fans, Systemair has been preparing for the transition to the new EU directive and we are now well-positioned to adapt to relevant requirements.

At Systemair, we are aware of our responsibility towards the environment. Our main contribution to modern environmental protection is efficient use of energy. The Green Ventilation symbol identifies intelligent technology in harmony with the environment.

# SELECT

## Online Selection Tool

Our online selection tool makes it easy to select your SAVE unit to match the specific requirements of the building. The selection tool is available on the Systemair website. The performance of SAVE units is guaranteed by Eurovent certification.

# INSTALL

## Swift delivery and installation

The SAVE range of units are designed to be versatile and to address different market requirements. The units can be easily mounted on the ceiling, wall, floor or attic. A custom-designed kitchen model is also available. The plug-and-play feature in combination with the start-up wizard ensures minimal installation time, allowing customers to enjoy a fully functioning unit in a short period.

# SAVE unit range

SAVE units are designed to be easy to work with every step of the way.

Our online selection tool helps you select the best unit according to your requirements.

Our standardised design and unit stock ensure the shortest possible lead times and easy installation.

Lastly, the SAVE control system makes it simple to configure, integrate and control SAVE units.

Project planning is an important part of any project, therefore, you can download BIM data along with all necessary product information from the online catalogue.

### 1. Go to the Systemair Online Selection Tool

You can get there on [www.systemair.com](http://www.systemair.com) or by scanning the scannable code here.

### 2. Choose product selector

Select residential units.

### 3. Find your SAVE unit

Input your conditions and requirements to find your SAVE unit.

### 4. Preview and select

Preview suggested SAVE units and select the one most suited to your needs.

### 5. Review and adjust standard configuration

Check the detailed product information and specifications to ensure the product meets your requirements.

### 6. Download technical documentation

Collect the documentation to share with your planning and installation team.

# Systemair Online Selection Tool

The right way to be sure you are making the best choice for your project.

You have a reliable, straightforward way of selecting the right unit and its accessories for any given project.

On our website, you will find a powerful product selection tool. The selection tool is user-friendly and will help you quickly and easily choose your SAVE air handling unit.

All SAVE models, including a wide range of accessories, are produced with a unique item number. Based on your input, the tool will calculate all relevant, project-specific parameters to find and select the optimal SAVE configuration. All data and documentation will be available for download before you place your order.

## INSTALL

# Benefits and ease of installation

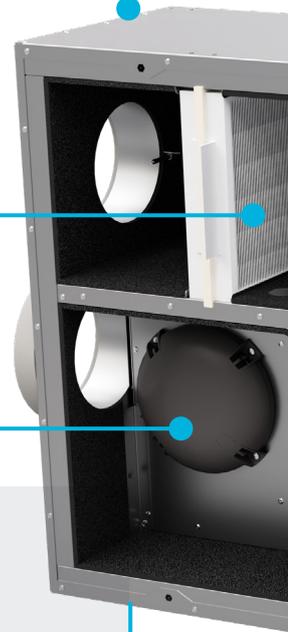

Specially designed features that will provide maximum benefit to your project.

### Compact full-featured casing

The compact casing is double-skinned galvanised steel with insulation in between. The materials fulfil C3 class in corrosion resistance. It is airtight, leakage compliant and designed to minimise breakout noise. In outdoor and exhaust spaces, the panels have extra condensation insulation to prevent condensation.

### Filters

Filters fulfil the new ISO 16890 requirements and ensure that the best air quality is achieved with the least impact on energy consumption. Spare part filters are available in kits (Supply + Extract).

### Energy-efficient fans

All units are equipped with high-efficiency fans with stepless EC technology. The fans are back-bladed radical fans that ensure high performance.

### Counter flow heat exchangers

We offer both condensation and enthalpy exchangers with 100% stepless bypass and accurate control. Together with the moisture sensor it reduces the need of defrosting.

### Rotating heat exchangers

Units with rotating heat exchangers have a stepless motor that regulates the rotation speed of the wheel. This stepless function enables **moisture transfer control** and **accurate temperature control**.

### Sensors

You get on demand-controlled ventilation with respect to humidity as standard in all units. You can also add other sensors, such as CO<sub>2</sub> sensors.

### Detachable

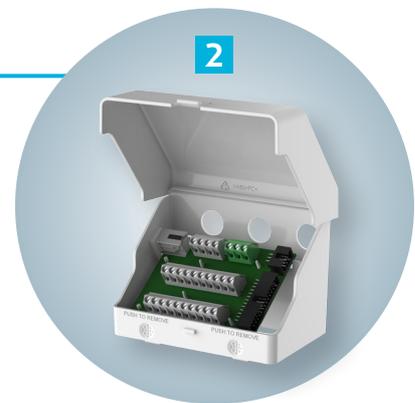

Mount your control panel in the wall, on the wall or directly on the SAVE unit using added magnets.

\*Control panels are connected by an up to 40 meter long RJ10 cable.

## Maintenance

Components are easily accessible for service and maintenance through several design features like quick releases.

### 1 Mounting kits

SAVE units are available with accessories that enable wide installation options.

### 2 Accessory installation

Install the accessories and auxiliary equipment easily since all the required connection terminals are located on the Connection Box - outside the unit. The Connection Box is detachable and can be relocated to an even more convenient location.

### 3 Complete control

The integrated SAVE control system serves as the brain and controls the performance of the unit. It allows the installer and end customer to choose different display options. Users can select SAVE TOUCH control or SAVE CONNECT 2.0 (with SAVE CONNECT mobile APP) for complete functionality and startup wizard or the SAVE LIGHT for basic functionality. In larger installations it can also be remote controlled via the inbuilt Modbus/RS485 communication interface.

# SAVE Control System

Simplified connection, configuration and control

## SAVE control benefits:

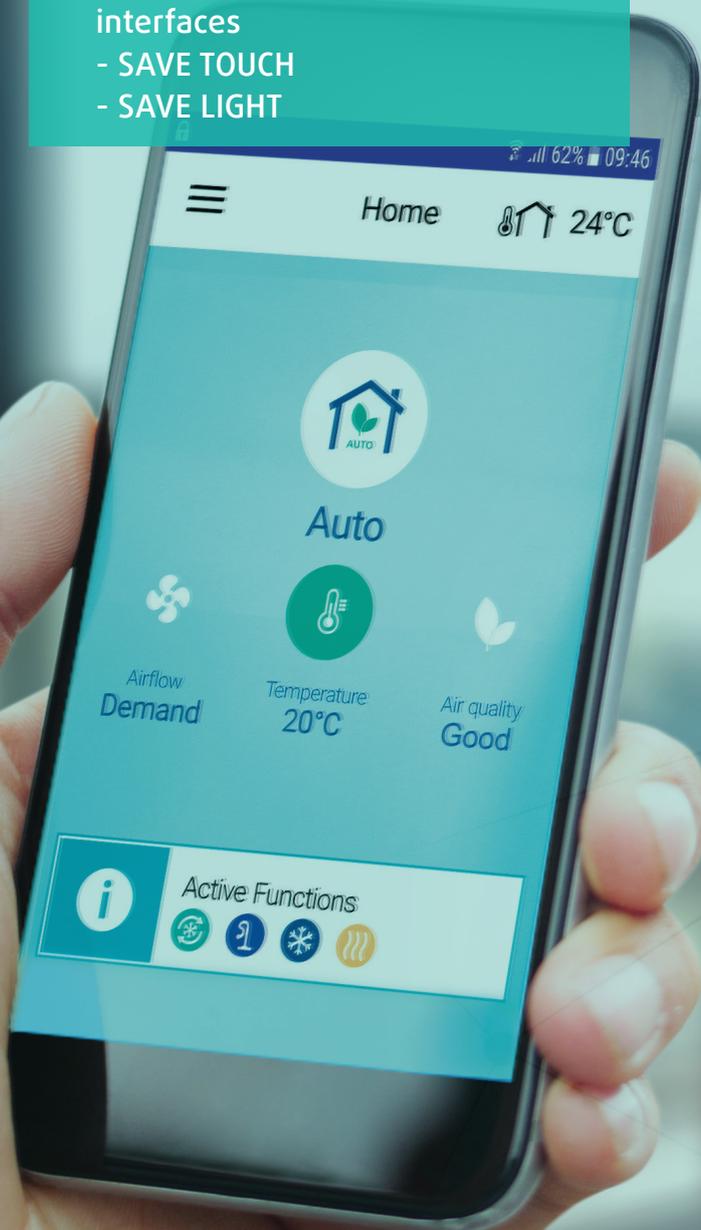

- Flexible and freely configurable
- External connection board
- Integrated Modbus RTU for BMS/SCADA integration
- SAVE CONNECT 2.0 in standard delivery for remote control and commissioning on site.
- Selection of accessory User interfaces
  - SAVE TOUCH
  - SAVE LIGHT

The SAVE control system - standard platform for the SAVE model range.

SAVE devices are standardly equipped with SAVE CONNECT 2.0 Internet Access Module which enables remote control using SAVE CONNECT mobile app and WEB interface for easy device commissioning, control and troubleshooting without need for additional control panels or internet!

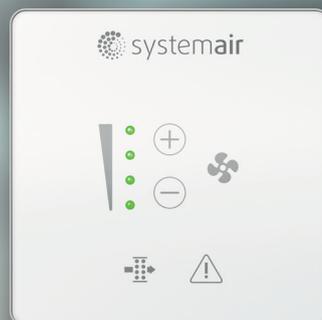

Internet connected SAVE devices can also be linked to SAVE PRO Cloud application. Systemair's offers convenience of remote and adaptable technical support, troubleshooting assistance, and the capability to monitor multiple devices—all seamlessly accessible through a unified interface.

We also offer options for control Interfaces – SAVE TOUCH for advanced users and SAVE LIGHT for very basic control and information.

### SAVE TOUCH

Advanced touch screen controller with intuitive and simple control interface. Simple unit configuration using Start Up Wizard, provides an option to monitor and control all unit parameters and offers an overview of alarm and data history.

### SAVE LIGHT

Simple control panel for basic control functionality, providing an option to reset filter timer and alarm indication.

### Systemair Services

Remote service of SAVE units and filter purchases.

### SAVE PRO

Professional users can monitor, commission and control their own and client SAVE units remotely using free and BMS like Portal.

### Mobile APP (Remote control)

The SAVE CONNECT mobile application offers full unit control and remote configuration functionality. The app completely eliminates the need for additional control panels, in addition offering a possibility for remote service and control of the unit.

### SAVE CONNECT Cloud

SAVE CONNECT reaches Homesolutions cloud services over your home internet gateway, that enables user not only to remotely control the unit, but also to receive unit software updates, access third party Smart Home platforms, remote technical service, filter purchase and more.

### Smart Home integrations

Link your SAVE unit to third party Smart Home platforms (Amazon, Alexa, Google home and IFTTT)

## CONTROL

### WEB Interface (Local control)

Connect to unit using your mobile device or Laptop over WLAN (WiFi) for easy commissioning or control of the SAVE unit. No Internet required

### SAVE CONNECT 2.0

Solution enabling the customer to remotely control the SAVE unit, manage unit configuration.

### Standard Modbus RTU

Freely configurable Modbus RTU over RS485 available for BMS integration.

### Connectors for external components

Connectors for external components (temperature, airflow control, safety, IAQ sensor, etc.) on the control units are clearly marked and grouped together to reduce installation and startup time. The external connection board simplifies accessory installation.

## CONTROL

# SAVE TOUCH

Advanced control panel with touch display for end-customers and installers.

### Useful live data

Active functions tab provides information about current unit activity.

### Make people feel good

Use pre-configured user modes to adapt the unit operation to your needs.

### Follow-up

Follow-up on unit operation historical data with an alarm and unit data history log functions.

### Expand

One control panel is not enough? Connect up to 10 displays!

### Easy set-up

Use the Start-up wizard for quick and seamless unit configuration.

### Capacitive display

TFT based touch display provides high contrast, great visibility angles and clear visibility.

### Sleep mode

When the display is unused it will switch to Quick Info screensaver mode, providing only the most relative unit information.

### You are in control

Control all features of your unit - change airflow and temperature setpoints, configure and adjust control functions and configure additional devices.

### 2 Permanent operation modes

#### MANUAL MODE

Gives airflow control to the user.

#### AUTO MODE

Automatically controls indoor air quality.

### 5 Temporary operation modes

#### AWAY MODE

Save the energy once the house is unoccupied for shorter periods of time.

#### FIREPLACE MODE

Create an overpressure inside the building.

#### HOLIDAY MODE

Save the energy once the house is unoccupied for longer periods of time.

#### CROWDED MODE

Increase the airflow levels during periods of high occupancy.

#### REFRESH MODE

Increase the airflow levels for shorter periods of time.

# SAVE LIGHT

Ergonomic and robust control panel, developed for end-customers.

The control panel makes it easy to control the climate in your home.

## Sleep mode

The display will go into a full dark mode during the pre-set night hours.

## Visual notifications

LEDs indicate an alarm state and if it is the time to change the filters.

## Expand

One control panel is not enough? Connect up to 5 displays!

## Standard

SAVE LIGHT use the same plastic housing as the SAVE TOUCH display so all the mounting places are universal.

## Display

SAVE LIGHT comes in both black and white. Bright LEDs ensure clear visual status indication.

## Only what you need

Control the airflow levels using the intuitive two-button interface.

## 2 Permanent operation modes

### MANUAL MODE

Gives airflow control to the user.

### AUTO MODE

Automatically controls indoor air quality.

## 1 Temporary operation mode

### REFRESH MODE

Increase the airflow levels for shorter periods of time.

# SAVE CONNECT 2.0

Gateway to the SAVE unit for Mobile APP or Local WEB Interface

## Stay updated

Receive all the latest unit software updates keeping your unit up and running with all the latest unit functions and features.

## Remote Service with SAVE PRO Cloud application

Connect to SAVE PRO Cloud – professional Ventilation Management platform for B2B partners. Get the convenience of accessing remote and adaptable technical support, troubleshooting assistance, and the capability to monitor multiple own and client devices.

## Wireless

SAVE CONNECT 2.0 module enables wireless internet connection from home router or your mobile phone.

## Store and Save

Configuration files can be stored into the SAVE CONNECT 2.0 module, allowing users to copy the configuration from one unit to another without requiring an Internet connection.

## Remote Access via APP

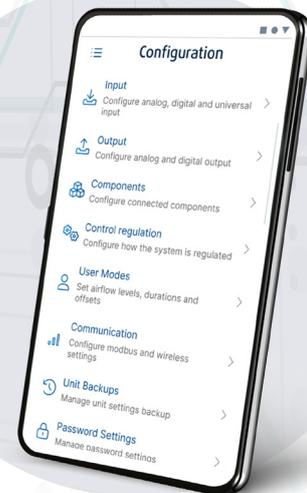

SAVE CONNECT 2.0 enables the user to control the device using the SAVE CONNECT mobile application, unlocking full device control, monitoring and configuration functionality!

Download SAVE CONNECT mobile app from Google Play or App Store.

## Local access via WEB interface

SAVE CONNECT 2.0 fully replaces SAVE TOUCH control panel for installers, enabling configuration, troubleshooting and control of the SAVE device via inbuilt WEB page. No Internet or app required – just a mobile device with a web browser!

## STANDARD SAVE UNIT FUNCTIONS

### FAN CONTROL

- Manual Control – %
- RPM control – RPM
- Air flow control – m<sup>3</sup>/h, m<sup>3</sup>/s, l/s (accessory)
- Constant duct pressure – Pa (accessory)
- External control

### TEMPERATURE CONTROL

#### Control types:

- Supply air temperature control
- Cascade extract air/room temperature control

#### Functions:

- Free colling
- Free Heating
- Cooling recovery
- Outdoor air compensation for Supply or Supply/Extract air fans
- ECO mode (Electrical heater temperature setpoint offset)

#### Temperature control sequences with individual settings:

##### 1. Heater:

- Water (AO/DO)
  - FPT
  - Warm Keeping

- Electrical (AO/DO)
  - Emergency Thermostat
  - Overheat Temperature sensor

##### 2. Cooler:

- Water (AO/DO)
  - FPT
- Change-over (DO)

##### 3. Heat exchanger:

- Rotary (variable speed)
  - RGS (magnet)
- Plate (variable position)
  - BYS (end position)

##### 4. Extra:

- Extra zone Heating (AO/DO)
- Extra zone cooling (AO/DO)
- Preheater (AO/DO)
- GEO
  - Cooler (DO)
  - Preheater (DO)
- Circulation pumps for all control sequences

### DIGITAL INPUTS

- User mode activation (adjustable stop delay and airflow levels)
- Fire Alarm
- External Stop
- Cooker Hood
- Central vacuum cleaner

- Pressure Guard
- 3 freely configurable digital Inputs (adjustable stop delay and airflow levels)
- Extra controller alarm
- Change-over feedback

### EXTRA FUNCTIONS

- Week schedules:
  - on/off control of external component via digital output
  - 7 days with 2 scheduled and unscheduled periods each
  - adjustable airflow levels for periods
  - adjustable temperature offset for periods
- Moisture transfer control
- 5 extra sensors (RH/CO<sub>2</sub>)
- 5 User modes with adjustable stop delay and temperature offsets
- Outdoor air damper control

### DEMAND CONTROL

- CO<sub>2</sub> (accessory)
- RH (standard)
  - Summer/Winter setpoints

# Energy-efficient ventilation for all kinds of homes

The Eurovent-certified SAVE series includes a wide selection of energy-efficient ventilation units with modern designs to suit both houses and apartment blocks. All SAVE units surpass market requirements for a healthy indoor climate and low energy consumption. All units are suitable for use in both new and renovated buildings and always come preprogrammed, tested and ready to install. All you have to do is "plug & breathe".
