SmartTube fluid transfer set sterile

Description

The SmartTube is our fluid transfer set to be used on the SmartFiller and SmartPump during aseptic pharmaceutical compounding for filling syringes, vials, elastomeric pumps, bags and bottles. The tubing set is also 100% compatible for use with the peristaltic Repeater Pump. The tubing set is sterile, non-pyrogenic, latex-free, phthalate-free, vented and CE-marked. The trifurcated spike version of the tubing set allows the reduction of fluid source changes from IV-drug bags or bottles. Furthermore luer-lock version of the tubing set is available, which has a luer-lock connection at both ends.

SmartTube Fluid Transfer Set Sterile 79.SFS01
Flexible tubing with a single spike inlet and a single male luer-lock outlet

SmartTube Sterile male luer-lock inlet fluid transfer set 79.SFS01MLL
Flexible tubing with a male luer-lock inlet and a male luer-lock outlet
