Integrations

The NextChapter platform connects unlimitedly with systems, platforms and services. With our Data Converter, we can create any link quickly and easily. In the list below we give a few common examples. Is your system not listed? No problem, because we can also easily link your system or platform. For features and processes in which NextChapter eCommerce frequently or realtime exchanges data with an external system, a micro license applies in many cases (with the exception of PSPs).

> Here are some examples, NextChapter eCommerce connects with all platforms and services.
