

# CUSTOMIZED WEBSHOP

As a customer of ours, we offer several digital services, including a customer-specific e-commerce, so-called customer-specific webshop. With a customer-specific webshop, you can, among other things, simplify your orders and gain control over purchases and costs. We offer a tailored solution according to our customers' needs.

## FUNCTIONS IN THE CUSTOMIZED WEBSHOP

CUSTOMIZED ASSORTMENT AND ASSORTMENT MANAGEMENT

ACCESS TO ORDER HISTORY AND STATISTICS

# CUSTOMIZED ASSORTMENT AND ASSORTMENT CONTROL

In your customer-unique webshop you see the prices and discounts that you have negotiated with us. You choose whether you, when logged in, should have access to see our entire product catalog or just one of your selected assortments. Each product comes with a picture, description and stock balance, but also with safety data sheets and certifications for the products concerned.

Assortment control is a setting that means that different people see different parts of the assortment depending on what authorization they have. This means that a person only sees what is relevant to their needs or, for example, a certain type of professional category.

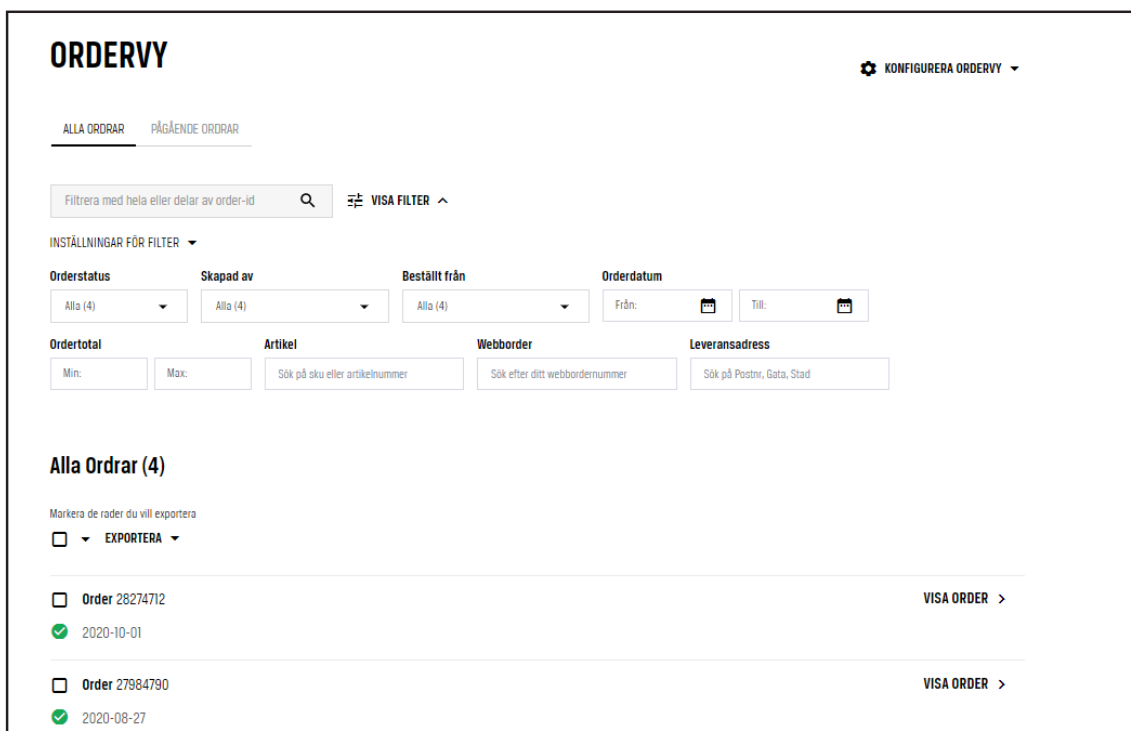

DECIDE WHAT DIFFERENT USERS SHOULD BE ABLE TO SEE ON THE WEBSITE

## ORDER VIEW

### Access to order history and statistics

In the order view you will find a comprehensive order history regardless of which purchasing channel you have made your purchases in. Which order history is displayed depends on your authorization. As an administrator, you have access to your company's entire order history and a regular user only sees the orders they have placed. In the order history you can search and filter by, for example, who placed an order, item number, order reference, project or delivery location within a certain time interval. You can easily download your order history or search results to Excel if you wish for your own statistics.

# ADMINISTRATOR PRIVILEGES

With administrator privileges, you can see and manage all users in your customer-specific webshop. You can easily add new users or edit existing ones. As an administrator, you can set a budget for how much a user is allowed to shop for and adjust this if necessary, as well as place orders for others.

ACCESS TO  
YOUR ENTIRE  
ORDER HISTORY

## Användare

Flytta med saldo till nästa år+ Lägg till ny användare

NAMN	ANST.NR	E-POST	ROLL	AVDELNING	KATEGORI	SALDO	USE STORE CREDIT (SALDO)	ADDRESS NUMBER	
Tools Admin		toolsadmin@tools.se	Admin User			-	0	-	<span>Redigera</span> <span>Ta bort</span>

All selectable delivery addresses are saved and edited in the address book.

# TEMPORARY DELIVERY ADDRESSES

If you have many temporary delivery addresses, we can enable a function that allows each user to manually enter a delivery address when placing an order. That address does not burden the address book but only follows that specific order.

# MY FAVOURITES

Under "My favourites" you can create personal shopping lists, so-called favourite lists. With these lists you can quickly add the items you have marked as favourites to your shopping cart.

## PERSONAL SHOPPING LIST

# CUSTOMER-SPECIFIC APPEARANCE AND FUNCTIONALITY

There are many customizations we can make to ensure that you as a customer have a pleasant and user-friendly experience. We can add your logo or create a unique home page with information that only your employees can see. You may have a dress code policy that you want to disseminate or specific delivery terms that need to be clarified in text.

In the cash flow, we can make several settings depending on your needs, for example which reference should be filled in or which delivery terms should apply to your web orders. These can be both mandatory and non-mandatory fields. This ensures that the person placing the order provides the information required for you to receive the correct information on your invoices and for your internal follow-up.

# CONTROL OF PURCHASES VIA POT OR APPROVAL

A pot is a budget for how much a user is allowed to spend per year. The pot can be used both in the webshop and in our stores. The administrator sets the pots and adjusts them as needed.

*You cannot combine pot and certificate on the same user.*

<input checked="" type="button" value="GODKÄNN"/>		<input type="button" value="NEKA"/>			

Approval is a function in the webshop that gives you the opportunity to approve or deny an order from a specific user before it progresses through the order flow.

## WORKWEAR WITH PRINTS & EMBROIDERY

When you buy your workwear from us, we can help you profile it. Your company is always offered a unique solution for your specific needs. If you place your order in the webshop, we can activate so that your workwear is automatically printed or embroidered before it is delivered.

## INTEGRATION WITH OTHER SYSTEMS

Punchout is a technology for exchanging correct and updated article information between your customer-specific webshop and your purchasing system or business system. The exchange of information takes place completely digitally, which reduces the risk of errors.

The user is automatically logged into our webshop via their purchasing or business system. Users add the desired articles to the shopping cart and then receive the articles back to their own system where a purchase order is created. The purchase order is sent to us via email or directly, via an integration, into our business system.
