- 11 Wi-Fi signal advice
- 12 Looking after your Hub

# TAKE A QUICK TOUR

Let's get to know the lights, buttons and ports. It'll help when setting up or fixing things.

## LIGHTS AND WHAT THEY MEAN

### 1. POWER

No light = Off  
Solid = On - device powered

### 2. INTERNET

Blue light = Connected to the internet  
No light = No internet connection

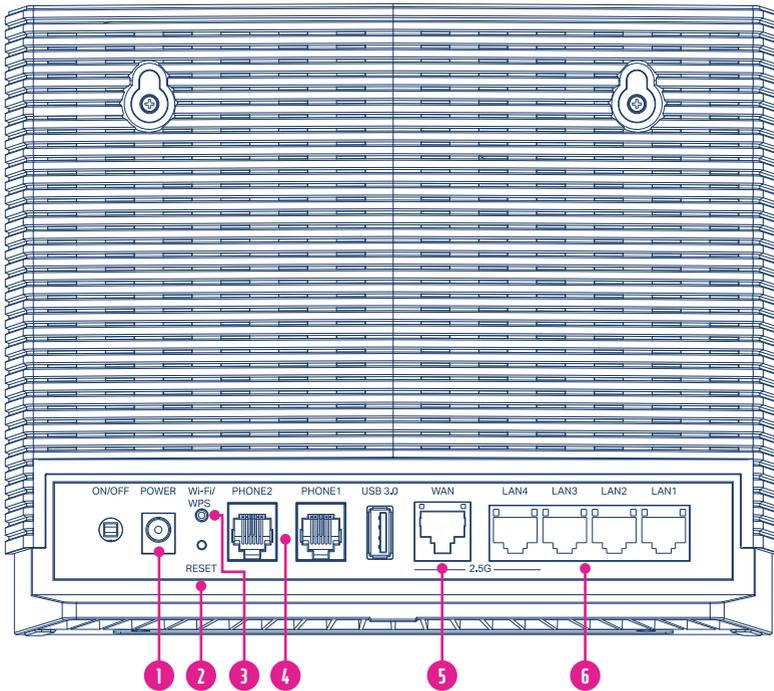

### 3. WAN

Blue light = Connected to fibre box or ONT  
No light = Not connected

### 4. LAN

Blue light solid = Device connected and active  
No light = Not connected  
Blinking = Interaction between router and connected device

# GET YOUR HUB ONLINE

## 1. POWER SOCKET

Blue light = Connected to the internet  
No light = No internet connection

## 2. RESET BUTTON (PINHOLE)

Press and hold for 5-10 seconds to reset router

## 3. WPS BUTTON

Press briefly to connect your devices to WiFi

## 4. PHONE PORTS

**(GREEN - PHONE 1 & PHONE 2)**

For connecting home phones

## 5. WAN PORT (BLUE)

This connects your Hub to the Line Box

## 6. LAN PORTS (YELLOW)

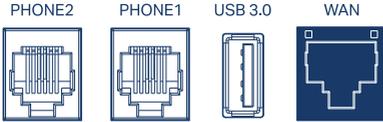

Multiple Gigabit Ethernet ports for connecting devices like consoles or TVs directly

# GET CONNECTED

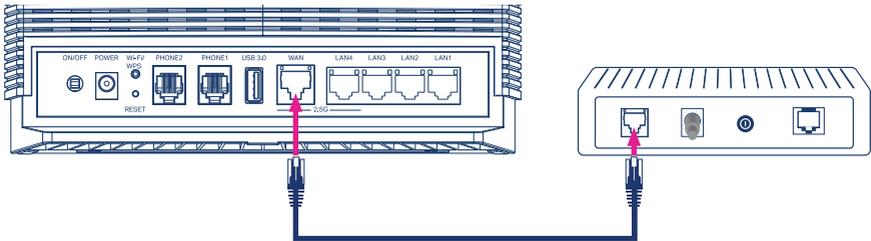

Plug one end into the **ETHERNET** port on the Line Box.

The other end goes into the **WAN** port on the router.

Connect to the blue **WAN** port on the TP-Link router.

## POWER UP BOTH DEVICES:

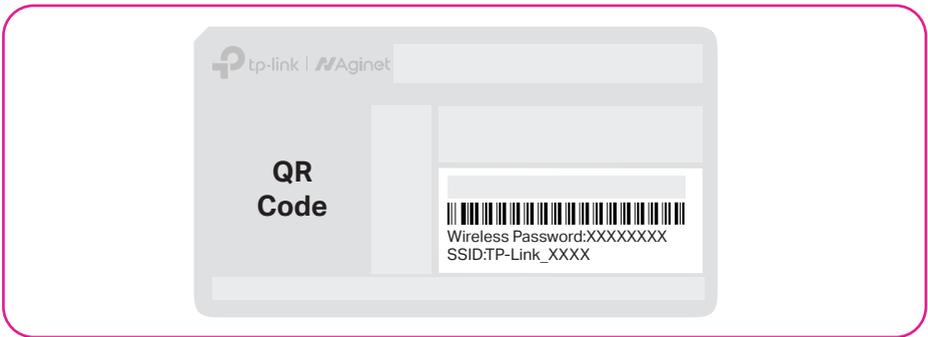

Plug in the power cables and switch on both the Line Box and the router.  
Check the indicators:

- Yellow data light on the Line Box = service is active
- Blue/Green Wireless, Internet, Broadband, and Status lights on the router = you're online

# CONNECT YOUR DEVICES

## USING WI-FI WITH PASSWORD:

- **Select Your Network:** Go to “Settings” > “Wi-Fi” on your device and select the network named “TP-Link\_XXXX”
- **Enter Password:** Use the password found on the sticker on the underside of your router.

## USING WPS:

- **Press the WPS Button:** Briefly press the WPS button on the back of your router. The WPS LED will start blinking.
- **Connect Your Device:** Within two minutes, activate WPS on your device by pressing the WPS button or selecting your Wi-Fi network.
- **Wait for Connection:** The WPS LED will stop blinking once connected.

## USING ETHERNET:

- **Wired Connection:** Plug an Ethernet cable into one of the yellow LAN ports on the router and connect it to your device.

# LOG IN TO MANAGE YOUR HUB

The screenshot shows a web browser window with the address bar containing 'http://tplinkwifi.net'. Below the address bar, there is a 'New Password' field with a key icon and a strength indicator showing 'Low', 'Middle', and 'High'. Below that is a 'Confirm Password' field with a key icon. At the bottom of the form is a 'Save' button with a mouse cursor hovering over it.

- 1 Open a browser and type: <http://192.168.0.1>
- 2 If prompted, create a secure password to access the settings
- 3 You're now logged in and can manage your router settings

# CONNECT YOUR ROUTER TO THE AGINET APP

Your TP-Link router can be managed using the TP-Link Aginet app.

- 1 **Download the App:** From the App Store (Apple or Google Play), search “TP-Link Aginet” and download to your device.
- 2 **Connect to Your Router:** Make sure your phone is connected to the Wi-Fi network provided by your TP-Link router.
- 3 **Launch the App:** Open the Aginet app on your smartphone.
- 4 **Manage Network:** On the home screen, select “Manage This Network”

# CHANGE WI-FI NAME AND PASSWORD

## OPTION 1: USING THE AGINET APP

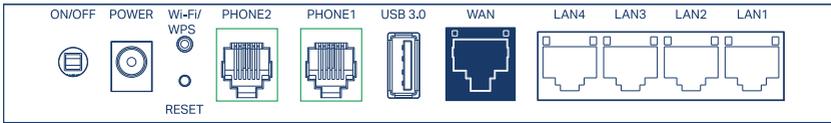

- 1 Connect to your Wi-Fi and open the Aginet app
- 2 Tap 'More' > 'Wi-Fi Settings'
- 3 Enter your new network name and password
- 4 Tap Save

## OPTION 2: USING THE WEB BROWSER

- 1 Go to 192.168.0.1 in your browser
- 2 Navigate to **Basic** > **Wireless**
- 3 Update your SSID (network name) and password
- 4 Click Save

# CONNECT YOUR HOME PHONE

To use your brsk BetterPhone (VoIP) service with an analog home phone:

- 1 Look for the two green phone ports at the back of your router, labelled **Phone 1** and **Phone 2**
- 2 Insert the RJ11 adapter into **Phone 1**
- 3 Plug your home phone into the adapter

That's it, your phone's ready to use

# PARENTAL CONTROL

## CONTROL SCREENTIME AND CONTENT

### Using the Aginet App:

#### Open the Family Section:

- Tap “Family” at the bottom of the Aginet app.
- Create a profile by setting a name, age range, and avatar.

#### Customise the Profile:

- Adjust content filters, set time limits, and manage other parental control settings.

## USING THE WEB INTERFACE:

### Access Parental Controls:

- Log into the router via **192.168.0.1** and go to the “Parental Control” section.

### Create a New Profile:

- Select “Add” and create the profile name.
- Add the devices you wish to control by clicking “Add” under devices.

### Set Controls:

- Choose the appropriate age range and adjust any additional controls.
- Set time-based restrictions if needed.

### Save Your Settings:

- Click “Save” to apply the parental controls.

# TROUBLESHOOTING TIPS

If you're having trouble connecting devices to your Hub, you can try the following:

**Check power and Ethernet cables**

**Check the indicator lights**

- Ensure Internet, Wireless, and Status lights are blue/green

**Restart the Hub**

- Unplug for 30 seconds, then plug back in

**Check your Line Box**

- Yellow data light should be on

# Wi-Fi TIPS FOR STRONGER SIGNAL

Keep your Hub central and visible

Avoid cupboards and thick walls

Mid-height shelf = best spot

Keep away from microwaves, baby monitors and cordless phones

For bigger homes, use a brsk BetterWifi booster to extend coverage

# TAKE CARE OF YOUR HUB

Keep it switched on

Clean it gently now and then

Reboot it once in a while

Regularly update your password

Remove old/unused devices from the network
