NOTE 1

- Keyswitch Arm/Disarm allows Away Arm of a single partition.
- Keybus integration allows Away and Stay Arm of multiple partitions, zone status and zone bypass.

The M2M devices marked with **K01** or **K02** are compatible for Keybus connection to the alarm panels marked with **K01** or **K02** in the chart.

The devices with Keybus version **K01** support **ONLY** the panels/features marked **K01**

The devices with Keybus version **K02** support **ALL** panels/features marked with both **K01** **K02**

NOTE 2

UDL feature - Upload / Download via RING / TIP:

- the MN and MiNi Series Communicators require additional MN01-RNGR module.
- The MQ Series Communicators **have** the UDL feature **built-in**.

*The M2M Communicators with Dial-Capture interface support ContactID, SIA and Pulse 4+2 communication formats.

**Contact ID is manually programmed for DSC Power832/PC5010.
