

# Case Study

**Antenna International**

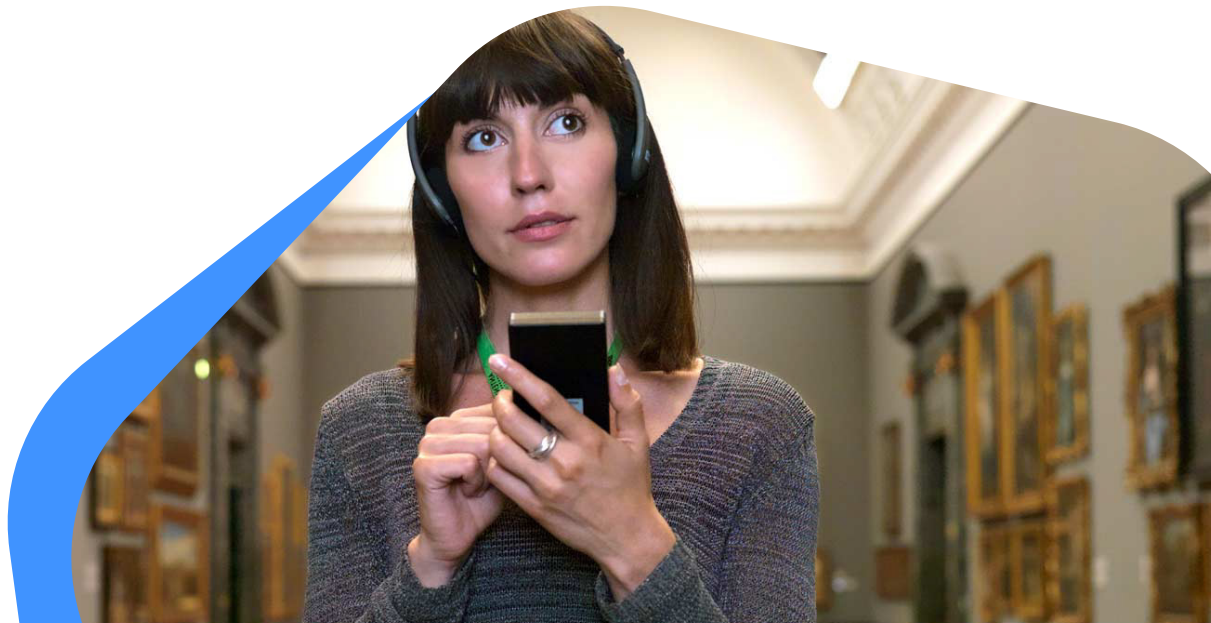

## The Company

Antenna International is a leading provider of audio guide and multimedia production services for museums, cultural heritage sites, as well as other public attractions. Their visitor experience solutions and audio tour guide equipment creates memorable, meaningful and engaging experiences.

## The Problem

Antenna was using a complicated and bulky payroll system that was not working for their team. After a reduction in staff, the payroll system was not running smoothly and the payroll advisors were not always available to help when questions arose. The lack of communication and training from the payroll provider was not working for the team.

# PayEscape's Solution

After reviewing several payroll and HR systems, **Antenna selected PayEscape and HRescape to manage their payroll and HR admin.** The systems are easy to navigate, useful for the team, and have an amazing support team to support their team. **The implementation was very smooth, with training provided during each step of the process.** Even now after implementation the team can access the PayEscape support staff easily and the new system is very easy to use.
