Key Highlights

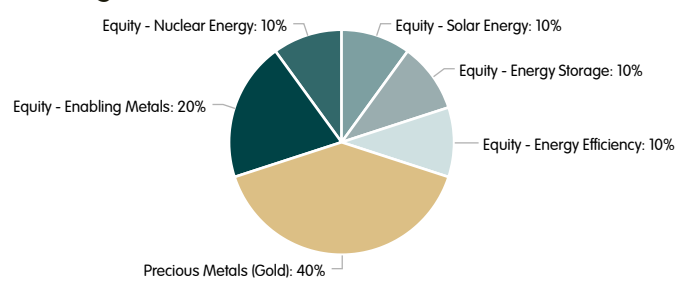

- A modern remake of the classic 60/40 portfolio - a truly unique and **disruptive** all-weather portfolio
- Global equity replaced by **60%** companies who enables the megatrend to a **electrified world**
- Bonds replaced by **40% Precious Metals (focus Gold)** to both **protect** and have **strong return potentials**

Investment Objective

The fund's strategy is structured around four sub-strategies – the generation of environmentally sustainable energy through solar and nuclear power – reduced energy consumption, lower emissions and recycling – energy storage – and the extraction of the raw materials essential for electrification.

We believe that companies exposed to the electrification megatrend will generate returns that outperform global equity markets and that gold will outperform bonds over the coming decades as the debt creation and money printing just goes on unabated.
