

JULY PROFILE

PHASE 1

- Sowing depth: 2-3 cm
- Soil: Vegetable soil, if necessary potting soil
- Germination temp & duration: 12-20 °C/4-8 days
- Row spacing/plant spacing: 25 cm/10 cm
- Sow indoors/harvest: March–April/August–October
- Sow outdoors/harvest: June-August/September–October
- Root depth: 40 cm
- Type: Moderate-Feeder

Problem areas

- Cabbage flies: make ridges, attach vegetable netting to protect from parasitic visitors
- Snails: Collect or apply mechanical protection
- Fungal and other infectious diseases: Remove affected plants, dispose with household waste

Care

- Observe a 3-year break in cultivation
- Prepare bed with compost
- Mulching helps keep the soil moist
- Water regularly

PHASE 2

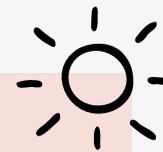

- Pre-sowing indoors: Fill pots or trays with soil. Poke holes 2-3 cm deep in the ground, put the seeds in, water and place in a warm, bright place. Keep moist through and after germination.
- Direct sowing outdoors: From July, make grooves 25 cm apart (depth 2–3 cm) in soil, place 2 seeds 10 cm apart, cover with soil and keep moist through germination.

Radish
"Blue Autumn and Winter"

Location

- Sunny to semi-shady
- Soil: Humus, loose
- Treat sandy soils with compost
- Pot: Use vegetable soil

PHASE 3

- Pricking (pre-sow indoors): As soon as the first seedlings show up, fill (larger) pots with vegetable soil. Place seedlings in new pots and water again.
- From pot to bed/raised bed/tub: Plants that have been pre-sown are only allowed outside from mid-May. To do this, make holes that are deep enough for the plants and their roots to have room.
- Isolating (direct sowing bed or pot): Spread seedlings that have sprouted too close together to an appropriate distance of 10 cm apart.

PHASE 4

- Harvest: After 3-4 months, you can start harvesting. Better to harvest a little too early than a little too late, otherwise the radish can taste woody.
- Storage: Do not wash off, rather twist off leaves and store in a box with sand in the basement. The radish can be stored for up to 3 months.

Good/bad Neighbours

Bean, carrot, lettuce, parsley, pea, spinach, strawberry, Swiss chard, tomato

Cabbage, cress, cucumber, onion, radish
