Light Tape® EL Lamps are a completely dimmable uniform light with no hot or cold spots. They are able to seamlessly cover any surface without the need for diffusion. Light Tape® is thinner than a credit card and can be custom made to any shape and cut to allow for surface penetrations. The entire surface is a light source, not edge lit LEDs scattered through a plastic sheet. It generates no heat, and remains cool to touch. Installed in matter of minutes, simply roll out the Light Tape®, and place your solid surface directly on top. Proudly Manufactured in the United States. www.lighttape.com
