

Leak testing with ROTHENBERGER

The all-in-one device: ROTEST GW Professional for reliable and standard-compliant leak testing

Date: 04.04.2024

ROTHENBERGER today introduces the latest member of its pipe testing technology product family: the ROTEST GW Professional. A leak tester that has been specially developed to meet the requirements of plumbing and heating installers. This all-in-one device makes it much easier to test for leaks in gas, water and waste water pipes as well as liquid gas systems.

One of the outstanding innovations of the ROTEST GW Professional is the plug and play functionality, which enables easy handling and automated test sequences. For example, the integrated air compressor automatically adjusts the required test pressure for gas pipes, which guarantees error-free operation and test reliability. The scope of delivery of the leak tester includes a comprehensive set of accessories that enable quick preparation for all relevant test cases. The test device can now also be used for leak testing on liquid gas systems.

The ROTEST GW Professional is unique not only because of its extensive range of applications, but also because of its DVGW certification, which makes every test standard-compliant and legally compliant.

With an integrated printer, test results can be immediately documented on site. Of course, all results can also be transferred to a PC. This creates a maximum of flexibility for a fast, standard-compliant work process.

The ROTEST GW Professional offers HVAC professionals an efficient solution that saves time and guarantees reliability. The leak tester is now available from our specialized trade partners.

About ROTHENBERGER

As a manufacturer of pipe tools and machines, ROTHENBERGER has stood for quality and innovation worldwide for more than 70 years. The tools offer professionals efficient solutions for the highest demands and cover all HVAC and refrigeration applications: from pressing, bending and cutting to evacuating, inspecting and cleaning pipes.
