

## Refrigerant extraction with ROTHENBERGER

# ROREC Pro A3: Revolutionary safety and efficiency in refrigerant extraction

Date: 04.04.2024

In a significant step forward for the refrigeration and air conditioning industry, ROTHENBERGER launches the ROREC Pro A3, a refrigerant extraction unit specifically designed to meet the challenges of the future. In response to EU environmental regulations, the ROREC Pro A3 defines new standards in terms of safety and performance.

The ATEX-certified, explosion-proof device is designed for handling refrigerant classes A1, A2L, A2 and including the highly flammable class A3. This makes the ROREC Pro A3 an indispensable tool for cooling system mechanics and technicians who are specialized in the safe and efficient extraction of cooling and air conditioning systems and heat pumps.

The ROREC Pro A3 is characterized by its outstanding performance. An oil-free 2-piston compressor and a powerful 4-pole motor guarantee fast and efficient extraction, while the compact and lightweight design enables high mobility. Intuitive one-button operation and a clear digital display make it much easier to use. As with all ROTHENBERGER extraction devices, the ROREC Pro A3 has the so-called PURGE function, which drains refrigerant residues efficiently and completely.

Especially the ATEX certification makes the device even more flexible in its operation. This means that the extraction unit can be used safely when handling refrigerant class A3. With its intuitive operation, the oil-free 2-piston compressor for high extraction performance and the ability to empty systems completely, the ROREC Pro A3 combines reliability with outstanding performance. In addition, its compact design, low weight and maintenance-free construction ensures a high level of user-friendliness and durability.

The ROREC Pro A3 is now available from our specialized trade partners.

### About ROTHENBERGER

As a manufacturer of pipe tools and machines, ROTHENBERGER has stood for quality and innovation worldwide for more than 70 years. The tools offer professionals efficient solutions for the highest demands and cover all HVAC and refrigeration applications: from pressing, bending and cutting to evacuating, inspecting and cleaning pipes.
