Welcome to ROTHENBERGER!

ROTHENBERGER was founded in 1949 as a trading company for tools, machines and welding technology. As early as 1967, ROTHENBERGER developed the first system solution: the R-System. It consisted of tools for expanding, extracting and bending pipes—revolutionary equipment that enabled installers to connect pipes without fittings. This allowed plumbers to install drinking water and heating systems much more efficiently.

Today, ROTHENBERGER serves installers and ACR technicians worldwide with products which have been co-developed, tested and improved by professional users.

Focus on users

At ROTHENBERGER, we focus on professionals in the sanitary, refrigeration and air conditioning sectors. Day after day, they face challenges on construction sites and in services. They need tools they can rely on. That's why ROTHENBERGER manufactures tools and machines so easy to use. Our products are characterized by the highest quality and we are driven by innovation. Customers all over the world appreciate the reliability, durability and technical innovation of ROTHENBERGER pipe tools. Your demands are our motivation! To get the work done that needs to be done. Each and every day. Safe, fast and reliable.

Quality from the start

For more than 75 years, ROTHENBERGER has focused on customer satisfaction and success: from product development to production and quality control to service. We develop high quality, high performance and technically advanced pipe tools and machines.

Every development process begins with the specific needs of our users. We listen carefully, analyze the requirements and use our experience to create innovative solutions. ROTHENBERGER's production facilities use state-of-the-art technologies and processes to develop tools and machines while maintaining a high proportion of inhouse production—by professionals for professionals!

Sustainability means responsibility

In times of climate change and energy crisis, environmental protection is an important task for our society. ROTHENBERGER is taking responsibility and is committed to be climate-neutral. Since 2020, we have been operating photovoltaic systems with monocrystalline solar cells on the roofs of all buildings at the Kelkheim (Taunus) site in Germany.

Sustainability is a key concern for ROTHENBERGER. That is why we are focused on durable products, system solutions and batteries that can be used across manufacturers. This saves material, costs and valuable resources. Another great example of this is our ROCASE case system which enables safe tool storage and reduces packaging waste.

"Sustained by"

Every used tool whose product life cycle has been extended by a repair or upgrade and is sold again receives the "Sustained by" sticker.

This shows that you have made a contribution to sustainability with your purchase and that a fixed amount of the sales profits has been donated to a climate protection project.

CAS—Cordless Alliance System

ROTHENBERGER, as one of the founding members, has been offering a comprehensive range of CAS cordless tools since 2018. The range extends from sanitary installations to refrigeration and air conditioning technology to service area. The proven battery and charging technology is developed by Metabo and is fully compatible with CAS products from other manufacturers.

AMPSHare—Powered by Bosch

ROTHENBERGER has been a founding member of the AMPShare battery platform since 2022. It is based on the 18 V battery technology from Bosch. The batteries and chargers of this alliance are fully compatible with all AMPShare tools and machines of the alliance partners as well as with the battery-powered 18 V tools from Bosch Professional. In future, all ROTHENBERGER battery tools will be offered with an AMPShare interface.

Constant Force Technology

The CFT guarantees a constant axial pressing force over the entire service interval. A very important requirement for the production of sealed press connections.

CFT guarantees:

- ROMAX NANO: several pressing force levels (iJAW and 32 kN) / no limitation of pressing cycles / 2 years
- ROMAX Compact III: 19 kN / 40,000 press cycles / 2 years
- ROMAX Compact TT: 19 kN / 40,000 press cycles / 2 years
- ROMAX 4000: 32 kN / 40,000 press cycles / 2 years
- ROMAX 3000 AC: 32 kN / 20,000 press cycles / 2 years
- ROMAX AC ECO: 32 kN / 10,000 press cycles / 2 years

Constant force due to CFT

Measurement under load—UPONOR NW 75

No system commitment

Users are free to decide which fitting systems they want to press. They are also free to choose the manufacturer of the press machines and press tools. There is no legal provision, DIN standard or other provision—for example, a regulation established by means of a DVGW worksheet—which obligates the tradesmen to exclusively use the press tools or press jaws of just one fitting or piping system manufacturer.

The only decisive factor is whether the fitting system and pressing tool are suitable for one another – only in this case is the tightness guaranteed. The Pressnavigator app provides guidance by enabling users to find the suitable press tool for the fitting system, or the suitable fitting system for the press tool.

Controlled press cycle

After reaching a predetermined pressing force the press cycle switches off automatically. The piston retracts after the necessary pressing force has been reached. This guarantees uniform and reliable pressings as leading system manufacturers require.

Electronic control

The electronics of the ROMAX NANO, ROMAX Compact III, ROMAX Compact TT, ROMAX 4000, ROMAX 3000 AC provide for a safe pressing cycle:

- Control of the battery charge status
- Safety start-inhibitor when the battery is too low
- LED display of the service interval and any error messages

Press jaw sets >B< MaxiPro

An innovative press system suitable for air-conditioning and refrigeration applications consisting of Conex Bänninger® >B< MaxiPro® fittings, suitable press jaws and press machines from ROTHENBERGER.

Tight connections up to 48 bar

- The O-ring is resistant against several oils including ester oil.
- The 3-point press, one on each side of the bead and one press compressing the O-ring, provides a permanent and secure joint.

The advantages

- Only 3 seconds per joint completion
- Saves approx. 3 minutes per connection
- Flame-free joint, no hot work permit needed
- No need for nitrogen purge

Made-to-last through laser hardening

The press jaws are partially laser-hardened. This makes them particularly durable in those places that take the most pressure. Laser hardening increases the jaws' durability considerably.

3-point press technology

Three press points: one on each side of the bead and one compressing the O-ring for a permanent and secure joint

How to install the Conex Bänninger® >B< MaxiPro® system?

Conex Bänninger® >B< MaxiPro® benefits from a 3-point radial press—three press points, one on each side of the bead and one press compressing the O-ring. This provides a permanent and secure joint. As the connection is a mechanical joint, there is no need for nitrogen purge during the joining process.

1. Cut the tube to length.

2. Deburr and remove all external sharp edges.

3. Use a pencil deburrer on internal edges.

4. Clean the tube end with a circular movement, avoiding grooves that run parallel to the tube.

5. Check for defects.

6. Ensure the O-ring is seated.

7. Mark insertion depth using depth gauge and insert tube fully into the fitting.

8. Align jaws squarely on the fitting and complete the joint.

9. Mark the completed joint.

Please note: To ensure a safe and tight connection please follow the detailed Conex Bänninger® >B< MaxiPro® installation process. For more information, please visit the Conex Bänninger® website: conexbanninger.com

Precise drilling of the pipe without a centre punch—drill stop prevents perforation of the pipe

Insert extractor hook into the drilled hole and screw the bell firmly against the drill hole

Using the ratchet, turn the extractor to the left, while paying attention that the V-block is seated securely

After extraction, set correct insertion depth (dependant on pipe Ø) with cam pincer

Simply calibrate the tee Ø on the UNIDRILL Automatic and the drilled hole Ø will automatically correspond to the extractor hook required.

Extractor ratchet

In combination with the neckers for an even and material-friendly necking of pipes and suitable for right- and left-handers.

ROTHENBERGER ROLOT is especially suited for capillary soldering of copper pipes without fittings. Copper / phosphorus / silver solders are highly formable, and are therefore recommended for joints that are subjected to high thermal and mechanical alternating loads.

Application Benefits

- Non-foaming
- Heat resistant up to 200 °C
- No flux required for copper/copper brazing (except S 34 and S 45)
- Environmentally friendly manufactured with newly developed production technology, corrosion-neutral, scale-free, improved flow behavior

Instructions for safe and proper use of the refrigerants

Refrigerant

- Wear protective gloves and safety goggles
- Do not let refrigerant come in contact with skin
- Do not inhale high concentrations of vapours (Lack of oxygen causes a narcotic effect and is a danger to life)
- Do not smoke around refrigerant
- Working place / room must be thoroughly aired, if necessary extracted

Refrigerant bottles

- Secure against accidents, do not throw
- Do not expose to direct sunlight and do not place near radiators or other heat sources
- Do not use open flame
- Do not disassemble or remove valves
- Damaged bottles need to be properly returned
- Close empty containers

Air-conditioners

- Air-conditioner leaks need to be repaired immediately
- Do not allow refrigerant to leak while filling or doing maintenance work
- In high concentrations (for example pipe burst), leave the room and do not enter again until it has been properly ventilated
- Only do brazing work together with protective nitrogen gas and only in well ventilated areas
