

Health tech app deployment

Transform your network into a strategic asset

This simple, but powerful connectivity setup provides a rapid route to market for Health Tech providers. It is based on a real customer story for a home care software provider, enabling an AWS-hosted app to be instantly accessible by NHS Trusts via the Health and Social Care Network (HSCN).

Benefits to you

Rapid Deployment

This infrastructure can be set up in a matter of days, not months, dramatically shortening your deployment timeline.

Access to NHS Customers

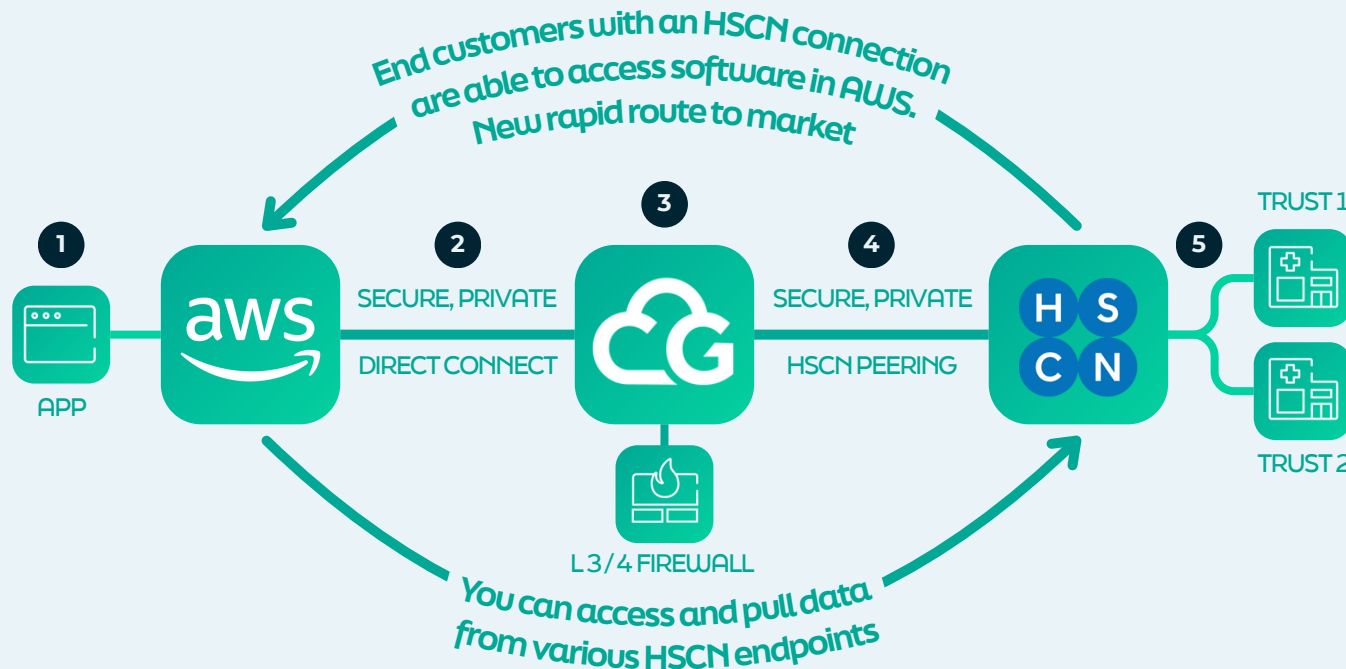

End customers on the HSCN can access your software. This gives you a rapid route to NHS customers and partners.

Richer Features & Better Service

Your app can access data from HSCN endpoints. This enables richer software features and better service delivery.

Secure & Compliant

Traffic is intelligently routed and secured. A compliant, modern network protects sensitive data to maintain your reputation.

- 1**
The customer's homecare app developed and hosted in their AWS environment.
- 2**
Secure, private connectivity between the customer's cloud environment and the core network hub.
- 3**
Cloud Gateway acts as the intelligent hub, ensuring all traffic is subject to necessary security controls.
- 4**
Secure, private peering connection to the Health and Social Care Network.
- 5**
Enables access for NHS Trusts and allows the application to access and pull data from other HSCN endpoints.
