PSN Connect
Cloud Connectivity to PSN

CLOUD GATEWAY

Overview

Cloud Connectivity to PSN enables access to applications and resources on the Public Services Network (PSN) from your Cloud Service Provider (CSP).

Cloud connections are provided via a dedicated private on-ramp through Cloud Gateway's data centre presence, which enables access to a wide range of CSPs. We can connect you to both PSN Assured (PSN-A) and PSN Protect (PSN-P). This service has been through the PSN Assurance process, specifically Cabinet Office PSN-Compliance offering SRV_0454. PSN Connect may be used to consume services on the PSN, or publish cloud services to the PSN (or both).

| Resilient, private connection to the PSN | Cloud Gateway platform | Resilient, private connection to your CSP |

The solution is secured via our Foundation Security service as standard. This set of configurable firewall capabilities manages and controls the traffic passing through the platform to/from the PSN and your CSP.
