

Health Connect AWS to HSCN

Overview

Cloud Connectivity to HSCN enables access to applications and resources on the Health and Social Care Network (HSCN) from your AWS environment.

Cloud connections are provided via a dedicated private on-ramp through Cloud Gateway's data centre presence, which enables access to a wide range of CSPs, including AWS. As a Consumer Network Service Provider (CN-SP), we then establish an IP connection from our platform to the HSCN in line with the HSCN Compliance Framework.

The solution is secured via our Foundation Security service as standard. This set of configurable firewall capabilities manages and controls the traffic passing through the platform to/from the HSCN and Amazon Web Services.
