

Ms. Jessica Vieira, PhD.
Director of Sustainability
Apeel Sciences
71 South Los Carneros Road
Goleta, CA USA

22 April 2020

Dear Ms. Vieira,

This letter details the findings of Quantis' review of your "Scenario-Specific Apeel Life Cycle Assessment Methodology" to assure it aligns with ISO 14044, adheres to high scientific quality standards and follows the most up to date LCA methodology whenever possible. As documented in the annexed document, we've reviewed two versions of the report, providing comments on a first draft which you had accounted for prior to our second review.

Our finding is that the methodology as described in the report aligns with ISO 14044 requirements and follows high quality scientific standards. We recommend Apeel to follow it as strictly as possible whenever a new LCA study is done under it, focusing especially in the correct regionalization of its processes as it expands to new markets.

Further details of our review have been documented in the annexed document, detailing all recommendations of the LCA Methodology Assurance checklist.

Please feel free to contact me if any of the above information is unclear.

With kind regards,

Cristóbal Loyola
Senior Sustainability Consultant
