

Understanding CPV Codes

Common Procurement Vocabulary (CPV) is a set of classifications for classifying, Products, Works and Services. The code set first came into existence in the year 1993. The whole objective was to make public procurement more transparent, efficient and uniform for all languages.

The structure is a hierarchical one with nine-digit code, the last being a check digit. The first two digits come in a block, so as to accommodate 99 divisions, and the next six digits each represent one level of classification, so there cannot be more than 9 groups at a given level of classification. Zeros are placed at the end of codes, except for the first two digits, and they indicate the level of accuracy of the code (the more zeros it has, the more general it is).

There are **9,454 CPV codes** in total which can seem very daunting - However, did you know that the 1st 2 digits denote the division. Therefore you can put just these 2 digits into the CPV area on the data platform and this will help you find what you are searching for right away.
