per item

- 200 mm diameter
- 3 mm thickness
- 100% reclaimed rubber

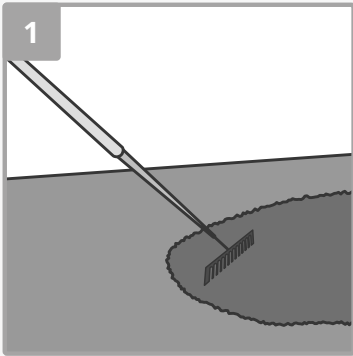

Wet-lay patio

Anyone can do it

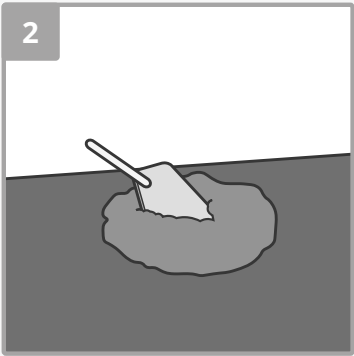

Laying a patio with this method **can be done by anyone** with basic practical DIY skills.

A clean, smooth look

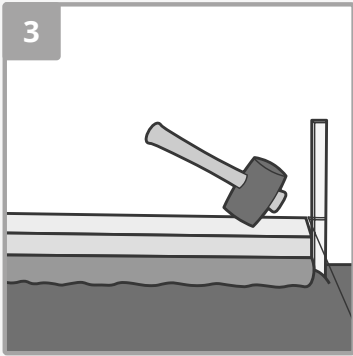

Wet lay is what would be thought of as a **'typical patio' look**; it gives a smooth, more modern look with rigid mortar jointing. If planned and installed correctly, wet-lay patio installations **can last for decades**.

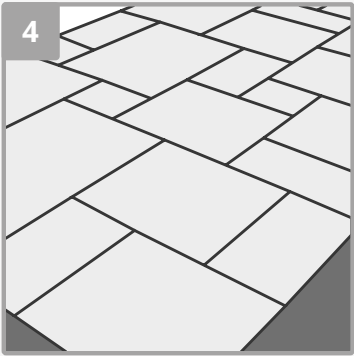

Level out stone chippings into your dug out (150 mm deep) patio area.

Add a 4:1 sharp sand to cement mixture to the sub base.

Lay the first slab, tap with a rubber mallet on one side to adjust level.

Continue laying slabs, leaving gaps between them for pointing.

On pedestals

Save precious time

With our **easy-to-use paving spacer gaskets**, everything fits into place neatly.

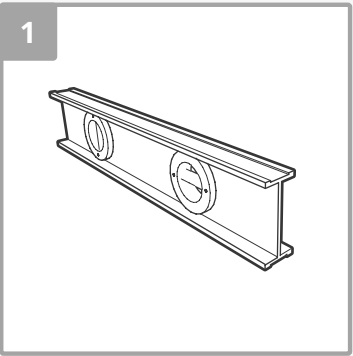

Slopes made easy

EnviroBuild **pedestal heights can be easily adjusted** by rotating the tops, allowing for the quick creation of drainage slopes.

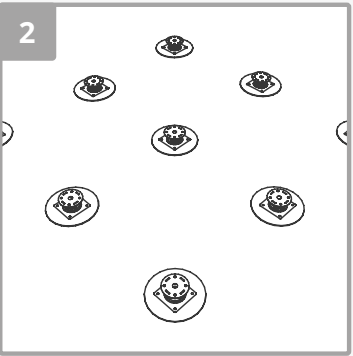

Full Guide

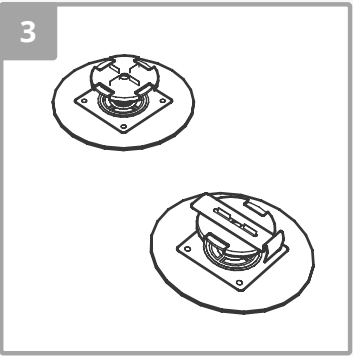

Find the full installation guide in the resource centre on our website, or simply scan the QR code.

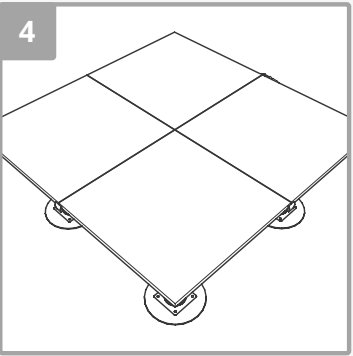

Your area must have a 1.5-2% pitch and be cleared and waterproofed.

Lay pedestals using a spirit level, keeping a 1:80 drainage slope.

Gaskets are used for spacing and edge bars are added at perimeters.

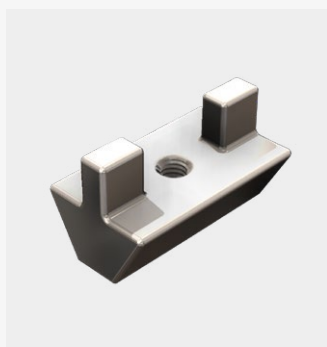

Gaskets leave a 2-4 mm gap between tiles for rainwater.

Wind-uplift

Adjustable steel pedestals give total control over the height and slope of the structure. MESA Non-combustible Adhesive is applied to the substructure to prevent wind-uplift.

- Perfect for balconies and terraces.
- Steel pedestals with joist cradles are used in the substructure.
- MESA Non-combustible Adhesive prevents wind-uplift.
- The 4 mm Paving Removal Joist Clip (pictured right) sits in the groove of our MESA Aluminium Joists, below the paving tiles, making the removal of vital paving areas possible.

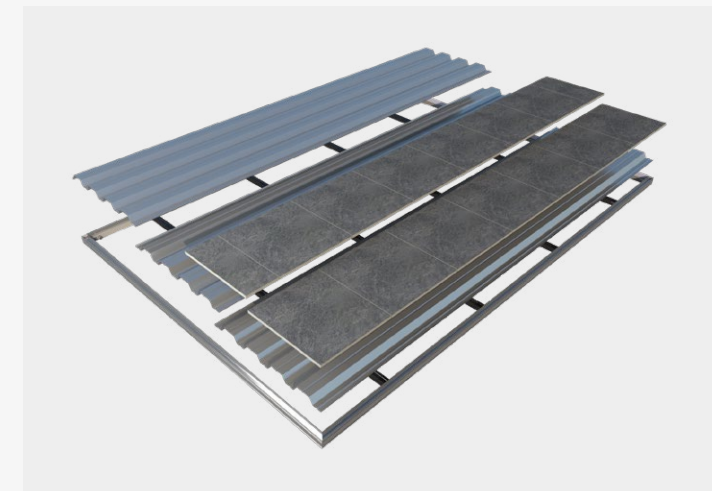

Open steel system

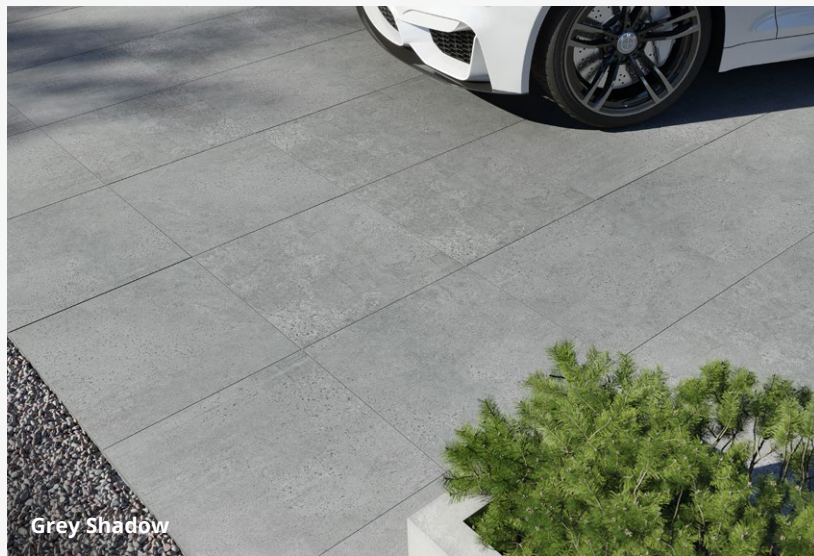

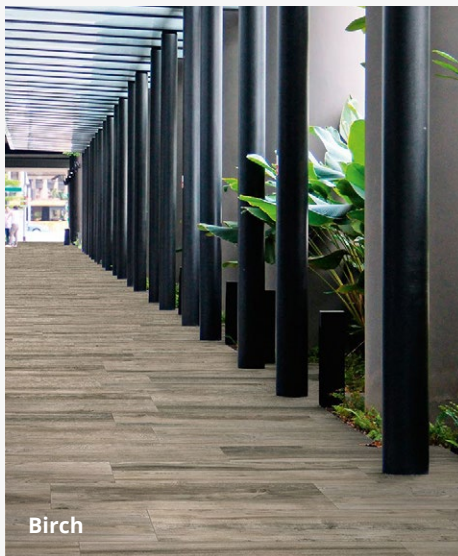

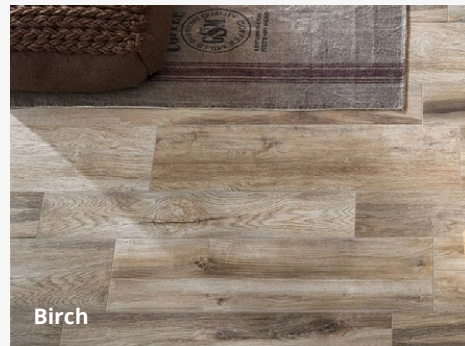

This system provides support using large steel trays and is made BS 8579 compliant with bespoke slopes. It was also engineered with wind-uplift security in mind.

- Perfect for open steel balconies.
- Steel trays provide full porcelain support.
- Bespoke steel slopes level the system.
- MESA Non-combustible Adhesive applied to substructure to prevent wind-uplift.

Case Study 

Paved Veranda

“

Our requirements were for flooring that was stylish and practical, and also added to the wow factor of our glass veranda.

We chose the wood effect for the enclosed area and a complimentary plain tile for the other areas. We were very happy with the samples that EnviroBuild sent us.

Maldon, Essex

Pictured: Maple Outdoor Porcelain Paving

We visited a number of flooring companies and builders’ merchants but kept coming back to the Maple Outdoor Porcelain tiles from EnviroBuild. The price was very competitive and the delivery time good.

Commerical Case Study

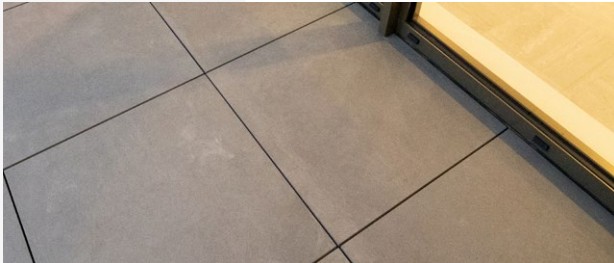

Thrayle House

Orientated around quality and high specifications, Thryale House was after a balcony flooring system to support its 170 new homes, accommodating for a variety of resident needs, from the elderly to families and couples.

Designed to comply with all current legislation, EnviroBuild’s Outdoor Porcelain Paving was selected to furnish all balconies across the Thrayle House collection.

Lambeth, London

Pictured: Iron Outdoor Porcelain Paving (No Longer Sold)

Along with its reliable non-combustibility, a variety of impressive benefits include anti-fade technology, scratch resistance and low maintenance requirements for resident security and ease.

Fibre cement boards

These decking-styled tiles are made up of a wood-stone composite and have been authentically crafted with a wood-grain texture.

per m²
£97.81 ex. VAT
£117.37 inc. VAT

per board
£46.95 ex. VAT
£56.34 inc. VAT

- 25 mm thickness
- 1 board per pack

Cloud Grey

Fibre-cement Installation Overview

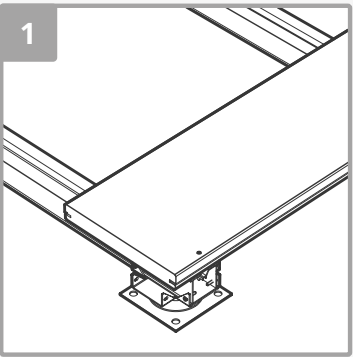

On pedestals

Save precious time

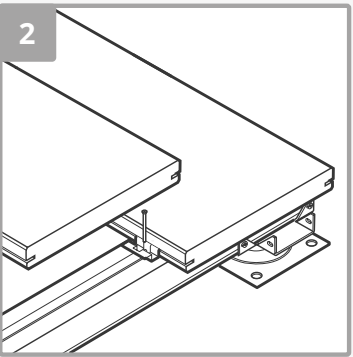

With our **easy-to-use hidden clip system**, everything fits into place quickly.

Slopes made easy

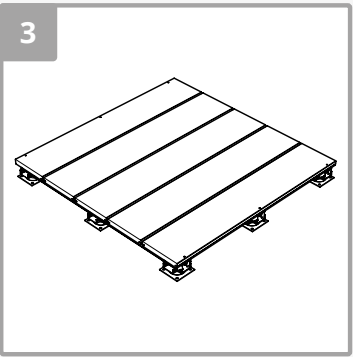

EnviroBuild **pedestal heights can be easily adjusted** by rotating the tops, allowing for the quick creation of drainage slopes.

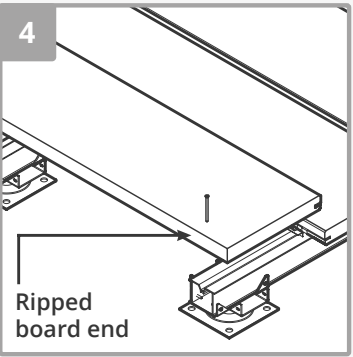

The first board is screwed to the joist using 45 mm screws.

8 mm clips are inserted into the board's slots and screwed down.

Subsequent boards are installed and held in place with clips

The final board should be ripped to fit and screwed to the joists.
