**LGC Clinical Diagnostics is a leading provider of Quality Measurement Tools, biological materials, and reagents for the IVD and extended life science industry. Our combined and ever-growing capabilities mean we are better positioned to support the needs of the clinical diagnostics industry. Together, we are working to enable laboratories to deliver patient results with confidence.**

### Maine Standards Linearity & Calibration Verification

VALIDATE® liquid, ready-to-use kits are designed to assist in the documentation of linearity, calibration verification, and verification of linear range required by many inspection agencies. VALIDATE will also provide assistance when troubleshooting instrument systems, reagent problems, and calibration anomalies. Multiple product configurations are available to meet the different needs of the many instrument systems available.

### SeraCare Quality Measurement Tools

Empower your results and challenge your methods with SeraCare's ACCURUN® molecular and serology controls and reference materials. ACCURUN controls and reference materials are whole-cell or whole-organism external controls that help you monitor all aspects of your molecular or serology testing methods and provide additional confidence in your laboratory test results. A well-designed QC program can help you avoid costly false-negative or false-positive results.

### SeraCare Clinical Genomics

Seraseq® next-generation sequencing (NGS) reference materials enable the promise of precision medicine by supporting NGS assay development and validation in analyzing actionable and challenging variants in patient samples. Using innovative technologies, SeraCare designs and manufactures a comprehensive portfolio of highly multiplexed patient-like reference materials used by assay developers and clinical laboratories to ensure consistency, reproducibility, and confidence of oncology and genomic health assays.

### Technopath Consolidated Quality Controls

A global leader in the development and manufacture of consolidated quality control solutions for clinical laboratories, including independent QC materials – such as the Multichem® QC range – and IAMQC informatics software. Its innovative product offerings help to increase laboratory efficiencies through consolidation and automation, simplifying the QC process.

### The Native Antigen Company Antigens & Antibodies

Developing and manufacturing premium quality antigens and antibodies, as well as offering a range of services to the diagnostic and biopharmaceutical industries. One of the world's leading suppliers of infectious disease reagents, with a rapidly expanding product portfolio, the company is widely acknowledged to be a primary source of reagents and kits for the study of emerging diseases.
