

Discover EasyPark Business Auto-stop

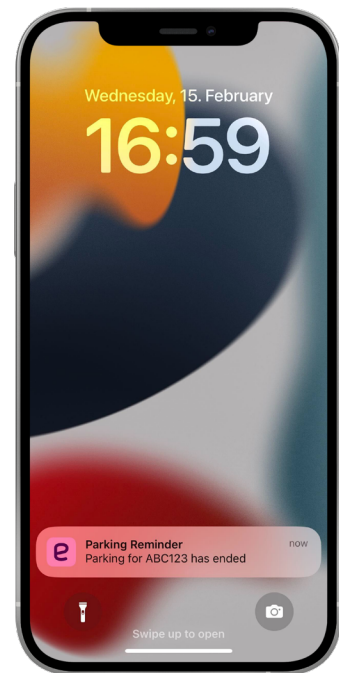

Never pay longer than you park, your parking session stops automatically

Save up to 30% of your monthly parking costs* whilst not having to think of your active parking.

Mobile parking apps have revolutionized the way we park and manage expenses. However, when we live in a fast-paced world it is often the case that active parking sessions are forgotten and costs quickly get higher than they need to be.

Wouldn't it be nice if our mobile parking app just knew when you move away from a parking spot?

EasyPark Business Auto-stop is a new way to manage your active parking sessions. By partnering with telematics service providers and leveraging technology, we make sure that your parking sessions end precisely when you drive away. No extra payments and no keeping track of when your parking session is about to expire.

EasyPark Auto-stop gives you:

Convenience

Free your employees from having to remember to stop their parking session.

Savings

Don't pay more than for the exact parking time you actually use.

Notifications

Employees will automatically be notified when they drive away.

Security

We are GDPR compliant and only share the minimum data to provide the service.

How does Auto-stop work?

- Auto-stop is an add-on to your EasyPark Business package.
- Contact your EasyPark representative to enable EasyPark Auto-stop for your employees.
- Contact your telematics provider to enable your vehicles or enable them in your provider's portal.

*Existing customers state that they can save up to 30% per month on their parking costs; however, the actual savings will vary based on your company's parking behavior and current costs.

Frequently Asked Questions

Is Auto-stop also available to use as a private EasyPark customer?

No, Auto-stop is only available to our business customers.

How will this be invoiced?

Auto-stop is an add-on to our EasyPark Business service, and so, the subscription will appear on your EasyPark Business invoice along with the regular subscription and transaction charges. This will be visible at a payment group and individual user basis.

Do I need a physical device in my vehicle?

Yes, Auto-stop currently relies on having an on-board device set up on your vehicle, as well as a telematics partner subscription and a subscription to EasyPark Business.

Are there additional requirements to use Auto-stop?

Not a requirement, but we recommend that you switch on push notifications on your mobile device to be made aware when the parking has stopped.

How can I order an on-board unit?

You can request an on-board unit from your current or desired telematics provider. If you do not currently have a telematics partner, or have no preference, we would gladly recommend a partner service based on your needs.

How precise is this service?

EasyPark stops the active parking session the moment it receives a signal from your on-board device that the vehicle has begun to move. This happens in a matter of seconds, however it can be the case that insufficient or poor network coverage (e.g. when vehicle is in an underground car park), planned maintenance or mobile operator outages these messages get delayed by a couple of minutes.

Are there any restrictions on the use of Auto-stop?

Yes, some cities restrict the ability to stop a parking session earlier than scheduled. In these cases, we recommend a more precise estimation of the parking time prior to starting the parking.
