

Let's get started

Let's get started

AI Accelerator

Follow 4 simple steps, and you will be ready to push the limits for what is possible in robotics.

Release the magic:

Mount → Wire → Install → Validate & Calibrate

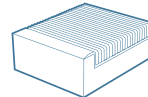

What to do now

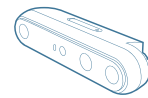

Prepare: Unbox the equipment, and get familiar with the manual that you will need for the next four steps.

- 1 Install the camera bracket, mount the camera
- 2 Guide cable from camera to the compute module
- 3 Install software on the cobot
- 4 Validate & Calibrate

In the box you will find

Box 1: Nvidia Jetson Orin Compute Module

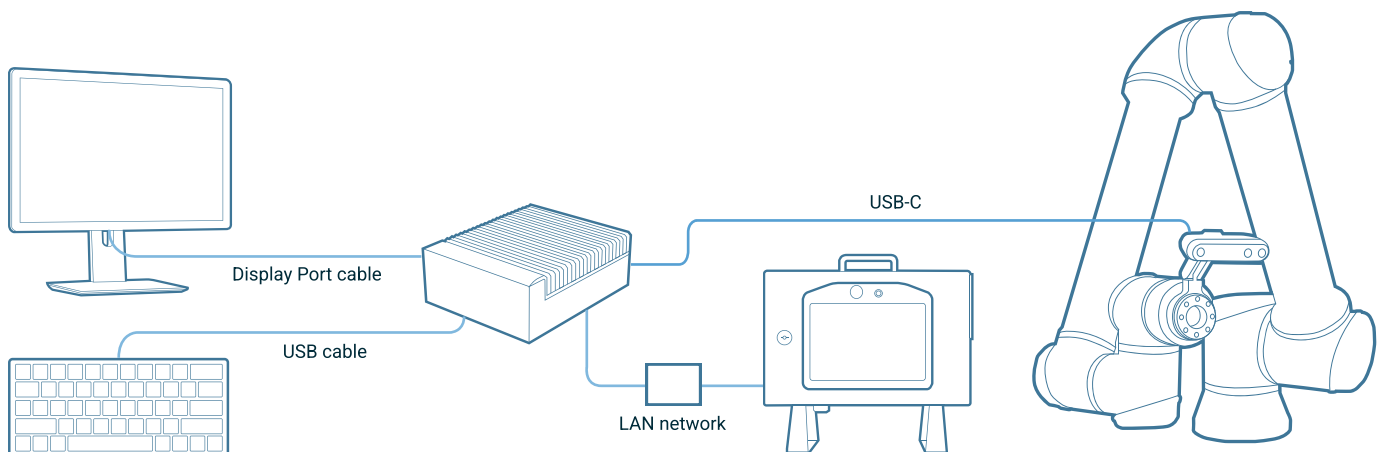

Box 2: Orbbec 335LG stereo camera

Box 3: Accessories for correct installation

In addition to what you find in the boxes, you will need a **monitor** with **Display Port cable**, a **keyboard**, and an **ethernet cable** to connect the cobot control box and compute module.

Where to go for everything

Inspiration, software, manuals, how-to videos, support, camera, calibration sheet. You find it all on our Developer Suite – A forum for developers by developers.
