

CAMCAT® zero

The new wire camera system from CAMCAT® Systems.....

The CAMCAT® zero was developed from scratch together with customers to fulfill the need of a small economic but high quality wire camera system. The aim was to achieve top quality with a minimum of crew, rigging time and external requirements.

The drive-system and the camera-system of our CAMCAT® zero can be operated by one person. It's an easy installation with low forces in the System.

100% fiber connections are used which makes it reliable and cost effective with no need of external RF connections.

Max. Speed
6m/s

Max. Acceleration
2m/s²

Length
100 m
328 ft

Certified from the German Health and Safety Group (TÜV) including DGUV V 17/18
