Platforms

- DXP
- Service and system design
- Modular architecture and infrastructure
- Data management

Commerce

- Order, cart, and payments
- Promotion, personalization, and recommendation
- Systems of record integration
- Product information management

The Very Group

Creating a future-fit tech transformation plan for a leading eCommerce company

The Challenge

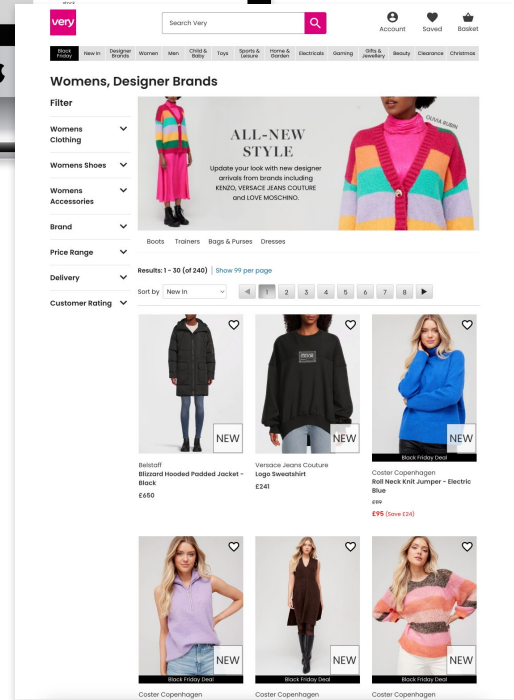

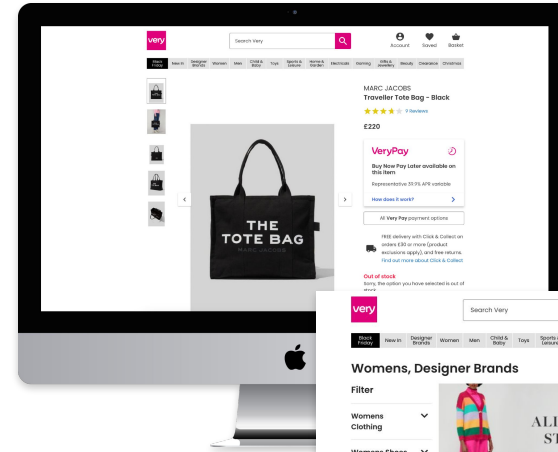

The Very Group is a digital retail brand that curates home, fashion, and family products across 2,000 brands, driving £2.3bn in annual revenue. For over a decade, the brand had used a legacy tech ecosystem. Looking ahead, the team wanted a platform that was more customer-focused and would position them to scale and evolve.

The Solution

We led The Very Group through a process of selecting and designing the right technologies and system architecture for their goals. We developed a multi-year tech investment strategy and roadmap that would allow them to make incremental changes each year. This included a plan to facilitate better customer experiences by transferring their eCommerce platform to a composable commerce option.

The Results

The Very Group now has a clear tech transformation program and roadmap. The new system and presentation layer is supported by a number of a microservices-based, API-first, cloud-native, and headless technologies, enabling customer experience changes to be delivered faster and more frequently than ever before.

Thomas Pink

Helping a luxury shirt brand increase revenue with bespoke commerce and customer experience tools

The Challenge

Thomas Pink sells professional attire across the globe. While they had name recognition in the space, their sales were declining. The Thomas Pink site user experience was not optimized, which was contributing to low engagement and sales. They needed an updated system to drive revenue and improve the UX.

The Solution

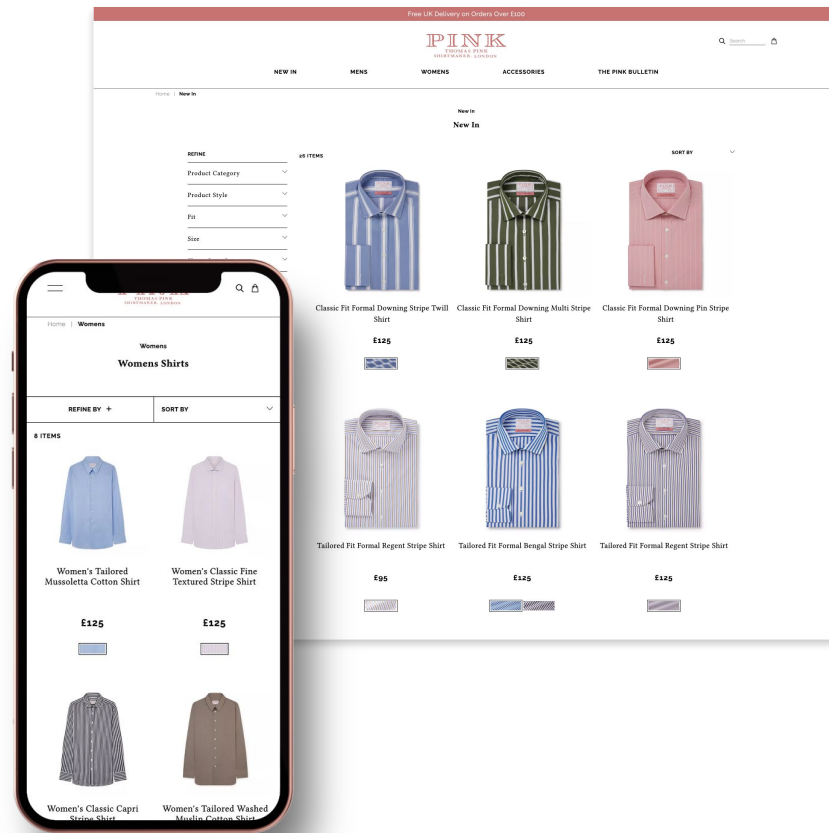

We evaluated the team's current platform and designed an updated set of tools that would function with the team's existing architecture. We swapped in new tools for order management and ensured their commercetools was optimized. To improve the customer experience, we crafted a bespoke customer login experience, where shoppers could get personalized suggestions of products they might like.

The Results

Between the improved platform tools and enhanced focus around internationalization, the site saw an increase of average order value from £100 to £290 per shopper.

We use modern methods to solve business needs

Key to success: Atomic Design

In the world of tech, MACH is often the first thought that comes to mind when we mention modularity, But this concept is not exclusive to technology; it also informs how we design.

Atomic design is a systematic methodology that future-proofs enterprise organizations and allows them to build and create component-based, modular design infrastructure.

At Apply Digital, our atomic design process not only encompasses the creation of your commerce system, but also includes:

- Content and design strategy
- Quick prototyping, code consistency, and ease of maintenance
- Empowering the creation of personalized customer journeys — one piece at a time.

We are experts in commercetools

PREMIER PARTNER

We believe in commercetool's platform:

commercetools projects

We have executed **10+ projects** for large, complex enterprise clients.

commercetools experts

We employ over **30+ experts** and are in the top tier of agencies with the highest number of certified developers.

Award-winning agency
