Qualifications & Memberships

- Member, CA ANZ
- Bachelor of Commerce, Double Major in Accounting and Economics
- LEAN Fundamentals

Imran has over 17 years of experience working with the Commonwealth, leading complex engagements and providing clients with business process improvement services, internal audit, IT reviews and performance reporting advice.

Imran leads teams to deliver a range of advisory services and has an in-depth understanding of best practice regarding governance, risk and key control frameworks. Imran partners with his clients and values open communication and collaboration. He delivers high quality outcomes and builds strong and collaborative relationships.

Engagement Experience

Performance Reporting

Imran supports Commonwealth agencies to mature and improve their performance reporting. This includes gaining a deep understanding of the organisation to identify the 'performance story'. He tailors solutions by undertaking workshops (executive groups and intensive one-on-one stakeholder consultations) to understand the organisation's performance reporting aspirations. He leads engagement with business areas to scan the existing data universe to translate aspirations into tangible processes and methodologies.

Internal Audit

Imran supports a number of Commonwealth agencies with internal audit services, including setting up internal audit functions or uplifting existing internal audit functions.

Imran assists clients to address current and emerging risks by developing assurance frameworks and supporting 'heatmaps'. These provide greater structure and purpose for the use and deployment of assurance resources.

Risk Management

Imran assists organisations to develop effective governance, risk and compliance tools and frameworks. He helps organisations implement solutions to make effective risk-based decisions.

He understands that Commonwealth agencies need tailored plans for risk management and that a generic process is insufficient for Accountable Authorities to meet their obligations under the PGPA Act. He assists agencies to identify their critical controls, articulate and operationalise their risk appetite, and develop and maintain tailored management frameworks for risk identification, evaluation and treatment.
