**Brachot is a leading international player in materials for landscaping and surfacing. The company offers a wide-ranging portfolio of natural stone and blended materials. With over 120 years of experience behind them, Brachot and its Family Members have a vast well of expertise to draw on and can select and supply suitable high-quality materials for any type of project. All in all, the internationally active company is the perfect partner for paving projects and public works. It also has a strong network of reliable international suppliers complementing its own quarries, production sites and distribution centres. In a nutshell: Brachot has the resources to respond to any individual query.**

## From quarry to finished product

*Crafting value for future generations*, that's what Brachot stands for every day anew. Together with our dedicated Family Members, we create materials that provide added value and stand the test of time. Natural stone comes directly from nature. It is an especially durable and highly eco-friendly product with a low footprint.

From extraction to production and installation, natural stone emits significantly less CO<sub>2</sub> than other materials. At Brachot, we further commit to this sustainable characteristic by continuously investing in an innovative machinery park, energy-efficient buildings, and environmentally friendly transportation.

Sustainability also takes centre stage during the production process. When extracting and sawing materials, there's often a part that isn't immediately suitable as a block or slab. This material is processed into items like cobblestones and aggregates, which can serve as foundation material.

An impressive example of sustainable entrepreneurship is the Zero Waste program by Family Member Kilkenny Limestone. This ambitious initiative aims for a production process without waste. All extracted materials are included in the Irish Blue Limestone product range, or if possible, reused elsewhere within the construction sector.

Furthermore, at specific sites, sludge is recovered and used by the brick and tile industry. In short, as a global player, we continue to strive for the optimization of natural resources and make the most of our natural reserves.

For a versatile and comprehensive range of paving materials, you can rely on Brachot and its Family Members: Kilkenny Limestone (p.17), Granitarn (p.27), Larvik Granite (p.37), and Cameleon (p.45).

## GLOBAL PARTNER FOR HIGH-QUALITY NATURAL STONE

**Brachot Tiles & Landscaping is an innovator with an extensive range: sandstone, granite, limestone, basalt, porphyry, and much more.**

Brachot relies on both its own quarries and imported materials from a strong network of reliable suppliers within and outside Europe. Our experts, from geologists to sales representatives, possess the necessary expertise to search for suitable materials for each paving project and provide them with custom-developed finishes tailored to your project.

We also have the necessary techniques to cut blocks and slabs into special sizes, always with a focus on durability and high quality. Our product range responds to the desires and needs of the market.

## Fair sandstone

### TruStone Initiative

TruStone is a joint initiative in which the Flemish and Dutch natural stone industry, Flemish and Dutch governments, NGOs and trade unions work together towards the responsible production and purchase of natural stone.

Within the initiative, we work together to meet all the main international standards for responsible procurement. The OECD Guidelines for Multinational Enterprises serve as the starting point for the TruStone Initiative. The guidelines are aligned with the United Nations Guiding Principles on Business and Human Rights and incorporate relevant elements of the ILO Core Labour Standards. These standards include both social and environmental guidelines.

Brachot participated in the start-up of this initiative. Together with the Brachot Family Members, we aim for fair and sustainable extraction and production of natural stone worldwide, while respecting labour conditions, environment, safety, and human rights. Each Family Member commits to mapping the entire chain, from extraction to distribution, so that issues can be clearly identified and addressed.

### No Child Left Behind

Through the No Child Left Behind project, Brachot initiated a collaboration with foreign partners and international and local NGOs in India. No Child Left Behind is a project founded on the vision that every child has the right to a childhood and quality education. By providing long-term support to the NGO Manjari, we are improving the lives of local families. Active efforts are made to keep children in Rajasthan, India, away from natural stone production and grant them access to high-quality education. These endeavours involve age verification, an increased number of teachers in schools, and the establishment of eight awareness centres for parents and children, even before they begin schooling. The outcome is remarkable: a significant reduction in child labour in the region and a considerable increase in the number of children returning to school.

### Our Contribution in the Chain

We actively participate in risk assessments and stakeholder dialogues conducted by TruStone and the No Child Left Behind project. The priorities set within these projects are implemented at the regional level by local organizations. Progress is reported on the TruStone website. Furthermore, we engage in direct conversations with our suppliers about these significant goals, and where necessary, we provide support in implementation. In the past year, we introduced the E-shram card at various suppliers in Rajasthan, contributing to transparency in labour relations and payroll administration. Additionally, we have established drinking water points and created shaded areas.

Kandla Grey - natural split - Zandberg, Ghent (BE)

# THE BIGGEST KILKENNY LIMESTONE QUARRY AND PRODUCTION OPERATION

Family Member Kilkenny Limestone has its own quarries specialized in the extraction and production of the renowned Irish Blue Limestone (Kilkenny Limestone). These sites combine advanced technology with a rigorous quality approach that meets the strictest standards. This Irish natural stone possesses valuable, authentic, and durable properties. With a variety of possibilities, sizes, and finishes, this solid, blue-grey natural stone with its distinctive fossils suits many styles.

All Kilkenny Limestone paving products are produced from ATG-certified materials. This prestigious certification guarantees not only the quality of the material and the different layers in our quarries but also verifies the production processes through external audits. Furthermore, this Family Member holds both an ISO 9001 and an ISO 14001 certification, demonstrating our compliance with the highest standards in terms of quality and the environment.

## Wide range of options

Kilkenny Limestone has ultra-modern production sites and can work on a highly project-specific basis. Using its own quarries immediately widens the range of options for finished products: think cobblestones, kerbstones, street furniture, outdoor flagstones, tactile paving, edging for platforms and pavements, traffic management features, profiled drainage channels, doorsteps, and more – custom finished for every project. Kerbstones are produced in variable lengths between 80 and 160 centimetres, to make the best possible use of the natural reserves.

## Sustainable enterprise

Kilkenny Limestone believes in taking care of our planet. It invests actively in sustainable sites and implements a zero-waste programme to minimise its own environmental footprint. This Family Member takes a mindful approach to the valuable raw material that it handles daily, working towards zero-waste production at each stage of the process.

# LOCAL PRODUCTION OF FRENCH NATURAL STONE

Granitarn takes you straight to the source. This Brachot Family Member subscribes to a sustainable vision for high-quality French and European natural stone. All stages of the production chain, from the quarry to sawing and processing to distribution, are centralized at the site in Burlats, in the South of France. As a specialist in landscape and surface materials, Granitarn is the perfect example of successful vertical integration. Our modern and optimized production facility significantly expands our range of products and our capacity to meet all specific product requirements.

Local Tarn materials from our own quarries are sustainably and responsibly extracted, and the blocks are processed into slabs, tiles, kerbstones, cobblestones, and more. In addition to materials from our own quarries, other natural stone from the extensive Brachot range is also processed at this production site.

Quarry Les Vergnes

 **Tarn Gros Grain Flamed**

## Robust character

Tarn is a durable, extremely strong natural stone with an abrasion resistance of more than 100 MPa, low porosity of less than 0.5% and high frost resistance (> 168 cycles). It is therefore particularly suitable for paving projects and locations with heavy usage and foot traffic, such as public spaces.

This French Tarn is composed of alkaline and plagioclase feldspars, grey quartz and black biotite. That gives this natural stone its unique variations in granularity and colour.

## A SELECTION OF OUR FINISHES

flamed

shot blast

## Abrasion-resistant finishes

The company has a collection of highly modern machinery to give the different types of tarn a wide variety of finishes. Standard surface finishes such as flaming or shot blasting yield an anti-slip stone with a rough look and a robust feel. If you prefer the purity of a stone hewn directly from a block, the cut finish is the perfect choice. Bespoke in-house developed finishes are also available for any project.

## Aesthetic value

At Brachot, we not only use Tarn, sourced from our own quarries near the Granitarn production site in Burlats, but we also process blocks of Rose de la Clarté. The coarse-grained, pink-red granite variety is extracted from our own quarries in Brittany (Perros-Guirec). This beautiful stone is processed into tiles, kerbstones, and other products. This unique and distinctive French natural stone lends public paving projects a unique look and feel.

# TRADITIONAL NORWEGIAN GRANITE

The Norwegian Family Member, Larvik Granite, offers five different and unique materials from its six quarries. Blue, green, gray, or brown: in each quarry, we extract natural stone of the highest quality with passion and care.

Our main products belong to the Larvikite range and originate from granite in Larvik and Egersund. This granite is extracted using traditional methods while incorporating modern and sustainable techniques. Larvik Granite is a young and modern international extraction company. Driven by customer focus, the company continually sets new standards and collaborates closely with customers to deliver the best quality.

Blue Pearl #1 LG Quarry

Blue Antique  
Honed and flamed

## Raw materials

Larvik Granite extracts raw blocks of the world-famous Larvikite in various colours directly from its own quarries: Blue Pearl #1 LG, Blue Pearl #9, Blue Pearl #8, Silver Pearl #5, Emerald Pearl #6, Blue Antique #7, and Nordlys. This magnificent stone originated from volcanic activity that occurred around 300 million years ago and is characterized by large, sparkling feldspar crystals. Unique blue crystals are embedded in the lush dark blue stone of our Blue Pearl, while Silver Pearl boasts radiant silver edges. Emerald Pearl offers an elegant dark green background, and Blue Antique is characterized by a warm brown backdrop.

These blocks can then be cut by other Brachot Family Members into paving products.

## Precision quality

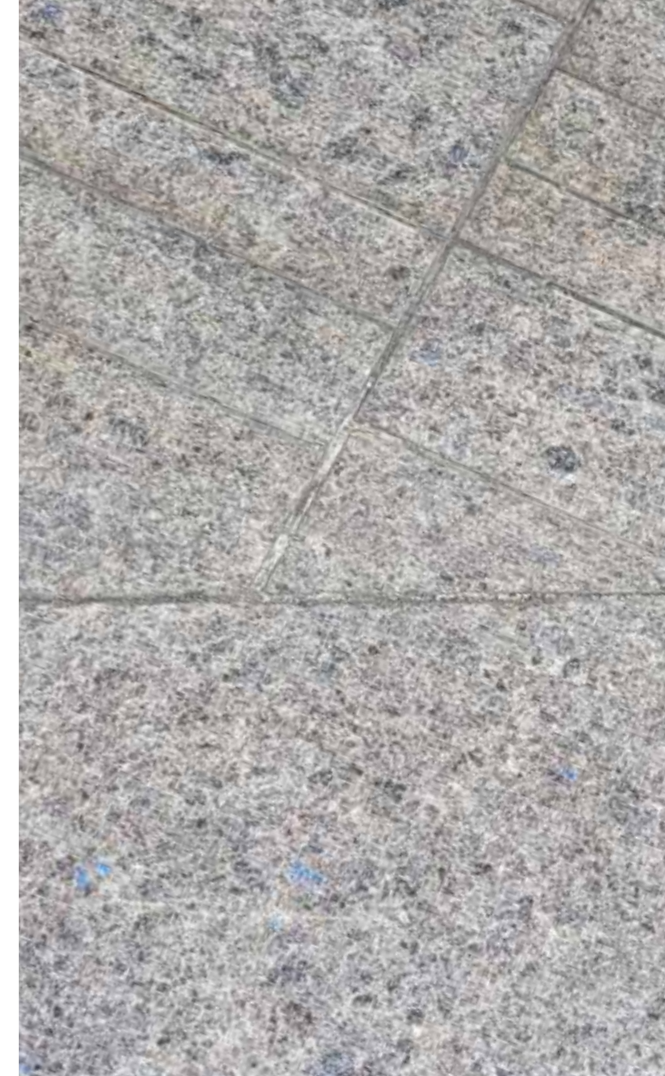

The teams at Larvik Granite's young, modern quarries have their eyes fixed firmly on the future. They believe that quality, efficiency, reliability and sustainability are all-important – and that's why the company works on innovative technical optimisation schemes for their quarrying work and plants. Every block that is taken out of the quarry is carefully registered. The company then invests in detailed quality checks. Experienced staff are employed for this purpose, expanding the in-house expertise.

# WORLD-CLASS GRANITE

Family Member Cameleon in South Africa is a producer of granite blocks and slabs for the construction and monument industry. Cameleon is the world's sole extractor and producer of Nari Black granite.

Furthermore, Cameleon produces and distributes blocks and slab material in natural stone from other African suppliers. We have an extensive range and can cater to every demand and need. Throughout the entire extraction and production process of our products, we combine technology - the finest in the country - with expertise. This allows us to deliver you the best possible solution.

← Nari Black Quarry

## A Legendary Force of Nature

Cameleon is the exclusive worldwide extractor and producer of the renowned Nari Black granite, a unique South African dark stone with boundless possibilities. With its exquisite colour, technical properties, diverse finishes, and sizes, this material suits all types of projects and architectural styles.

Our Nari Black granite blocks are directly extracted from our own quarry in South Africa. We ensure the extraction of the highest quality natural stone and transport it to our own site. There, the blocks are processed and cut into slab material of varying thicknesses and finishes. All the work is carried out in-house using the latest technologies.

Nari Black

## Wide range of South African granites

All our materials are available in thicknesses of 2 cm and 3 cm. Additionally, we offer slab material for applications in the monument and paving sectors with thicknesses ranging from 5 cm to 30 cm. There is always an ample stock of slab material and blocks. Furthermore, Cameleon produces and distributes blocks and slab material in natural stone from other African suppliers.

# CRAFTING VALUE FOR FUTURE GENERATIONS

[www.brachot.com](http://www.brachot.com)

Brachot extracts, produces and distributes landscape and surface materials in natural stone and blended materials. With its 20 quarries, 7 production sites and 15 distribution centres across Europe and Africa, Brachot controls the entire production process: from extraction to sawing and processing to distribution. This creates endless possibilities for the production of blocks, slabs, tiles and accessories for indoor and outdoor applications in natural stone and blended materials.

Brachot and its Family Members are firmly united by their focus on innovation. They continuously come up with new possibilities and applications, both in production and distribution. State-of-the-art machines and techniques enable Brachot to work faster and to ensure higher quality and greater sustainability. As a result, Brachot has become an internationally leading name in the world of natural stone and blended materials.
