THE STRENGTH AND BUDGET FRIENDLINESS OF MARBLE COMPOSITE

unimarble

unimarble _____

- ♦ Different designs
- ♦ Perfectly suited for window sills
- ♦ Low water absorption
- ♦ Strong and impact-resistant
- ♦ High bending and pressure resistance
- ♦ Easy to polish
- ♦ Budget-friendly
- ♦ Hygienic

BUDGET-FRIENDLY, HIGH-QUALITY COMPOSITE

**Unimarble marble composite
is hard, impact-resistant,
and remarkably hygienic.
This strong material is ideal
for your window sills.**

Brachot offers different Unimarble marble composite designs. This strong and budget-friendly material is composed of marble and limestone granulates, colour pigments, and polyester resin. The latter element, in particular, is the basis for the impact resistance and low water absorption of the Unimarble slabs.

Due to its high level of hardness and compact composition, Unimarble is suitable for various purposes, particularly ornamental applications. This includes window sills, as well as stairs and fireplaces. Marble composite, on the other hand, is not a suitable material for kitchen worktop applications.

Choose the design that suits you

Unimarble offers different marble composite designs that are easy to combine with any interior style. The colours vary from white to beige, grey and black. The evenly speckled structure, with sporadic small pigment spots, is unique to composites and give this material its character.

The Unimarble slabs are available in a size of 304 x 125 cm and thickness of 2 and 3 cm. The advantage of the large dimensions is that final products such as window sills, in particular, but also stairs, can be finished without any or with just a few seams.

Finishes

Technical innovation is in Brachot's DNA. That's why we conduct ongoing research into how we can develop new finishes and optimise existing ones.

We offer 2 standard finishes in the Unimarble collection.

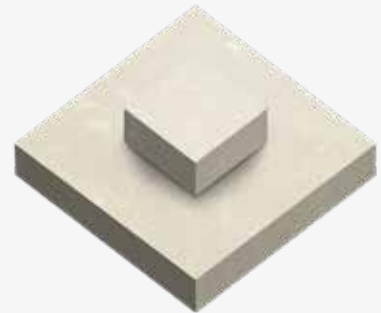

Polished

The glossiest marble composite finish. Let the colours shine their brightest.

Honed

The surface is scoured to a matt, even finish.

Impact-resistant and particularly durable

Unimarble Bianco

Unimarble marble composite has good technical properties. It is initially strong and impact-resistant. This material is therefore resistant to pressure and bending, and has low water absorption. The compact composition ensures that the surface can be highly polished, which makes the colours stand out best.

With the right cleaning products, marble composite can remain intact for generations. We are happy to give you advice and tips for optimal results, from initial cleaning to daily maintenance.

However, marble composite is not resistant to acids, heat or scratches from metal objects. This material is not suitable for use in the kitchen or for use outdoors.

CRAFTING VALUE FOR FUTURE GENERATIONS

www.brachot.com

Brachot extracts, produces and distributes landscape and surface materials in natural stone and blended materials. With its 20 quarries, 7 production sites and 14 distribution centres across Europe and Africa, Brachot has the entire production process in its own hands: from extraction to sawing and processing to distribution. This creates endless possibilities for the production of blocks, slabs, tiles and accessories for indoor and outdoor applications in natural stone and blended materials.

Brachot and its Family Members are firmly united by their focus on innovation. They continuously come up with new possibilities and applications, both in production and distribution. State-of-the-art machines and techniques enable Brachot to work faster and to ensure higher quality and greater sustainability. As a result, Brachot has become an internationally leading name in the world of natural stone and blended materials.
