

ENVIRONMENTAL AND ENERGY POLICY

FOREWORD

Our company designs and implements highly specialized process solutions for pharmaceutical and medical technology companies worldwide, as well as for consumer and home care products of well-known brands. Our portfolio is complemented by comprehensive services related to the customer's product. As a technology leader in various market segments, we are able to provide customers with customized solutions ranging from laboratory applications to full production lines. With a global network of subsidiaries and representatives, we are always close to our customers.

We are aware of the environmental and energy impacts of our activities and consider it our responsibility to conserve resources and energy within the scope of economic, technical, and organizational possibilities. To this end, we regularly identify and assess our significant environmental aspects and pursue clear, measurable objectives for the continuous improvement of our environmental and energy performance.

Our management system ensures compliance with legal requirements, the systematic recording and analysis of resource and energy consumption, as well as the ongoing documentation of the associated environmental impacts and energy flows.

We consider both environmental impacts and energy efficiency throughout the entire life cycle of our products and services. In doing so, we continuously work to minimize environmental risks, avoid waste, and ensure the proper and environmentally responsible disposal or recycling of unavoidable waste. At the same time, we implement measures to sustainably reduce energy consumption and improve energy efficiency.

The success of our environmental and energy management requires the commitment of all employees and service providers. Through regular training, we promote awareness of environmental protection, resource conservation, and energy-efficient behavior.

Our integrated policy is regularly reviewed and updated to reflect changing technological, economic and environmental conditions.
