The Uccello Kettle is a practical assistive technology that makes pouring a kettle feel light as a feather.

Uccello's detachable water body vessel sits comfortably within a sturdy base that has the added safety of non-slip feet for further stability of pour.

Unlike other kettles and kettle-tippers, the circular shape of the Uccello Kettle, combined with its rotating cradle, moves around the body of water to assist the flow of the pour, so you don't have to lift, strain, balance or aim.

The tapered design of the spout ensures water is targeted to the same spot every time, without the splashing, inconsistency or lack of control experienced with ordinary kettle pours.
