

# Service Bulletin

no. 11, 2006-05-22

## General maintenance

*System applicability: Marinfloc CD, TD and WhiteBox® units*

### **Important!**

*Only regarding customers with Rivertrace "Smartcell" oil content meters.*

### **Background**

It has recently come to our attention that the oil content meter may go into error mode if the manual clean unit in the cell is removed with the power turned on. The message "Cell breach" will appear in the display and the cell is then damaged and will need replacement.

There has been no information in the Rivertrace manual nor on the actual oil content meter up to this date that indicates this problem so we advise that the cell is clearly marked that it must be powered off before removing the manual clean unit.

The easiest way to switch off the power to the oil content meter in a WhiteBox® is to put the fuse F2 in the control cabinet into off position.
