

CD Bilge Water Separator

Developed over two decades to meet onboard conditions

Trusted, efficient and cost-effective

Experience the pinnacle of bilge water treatment with Marinfloc's CD unit, trusted on over 700 vessels globally.

With capacities from 0.25 to 5.0 m³/hour, it guarantees water purity below 5 ppm.

Our user-friendly HMI screen ensures crews can effortlessly handle any bilge water variation. Plus, with easy dosage adjustments, it's tailored for all onboard challenges. Beyond meeting MARPOL standards, the CD unit promises the market's most cost-effective operation.

Choose excellence; choose Marinfloc.

Key benefits

- Utilizes flocculation technology, eliminating the need for cartridge filters and centrifuges.
- Adaptable to treat the specific composition of a ship's bilge water.
- Type-approved to 5 ppm with Deckma.
- Designed for low energy consumption, contributing to reduced carbon footprints.
- Easy to install, easy to retrofit.
- Touchscreen control cabinet available for smart functions and online connectivity.
- Offers a low operational cost, ensuring value for money.

RELIABLE
AND
DURABLE.
