

# WTS for EGR NO<sub>x</sub>

Innovative exhaust gas water treatment system

## Advanced exhaust gas water treatment for the modern fleet

Marinfloc introduces the WTS, engineered for seamless integration with both MAN-ES EGR and WinGD iCER systems. Building on two decades of industry experience, we utilize the proven Marinfloc flocculation process to ensure that the WTS not only meets but exceeds operational expectations.

Crafted from robust stainless steel, it stands as a testament to durability and precision. To further empower ship crews, we've embedded intuitive digital functionalities for streamlined documentation. And for those navigating with MAN-ES engines, the WTS offers the added versatility of doubling as an efficient bilge water separator.

*A blend of innovation, reliability, and performance  
– that's the Marinfloc promise.*

### Key benefits

- Utilizes flocculation technology, eliminating the need for cartridge filters and centrifuges.
- Approved for both MAN-ES and WinGD iCER.
- Efficient energy use for minimized carbon footprints.
- Seamless integration with WhiteBox® for combined bilge water treatment.
- Low OPEX with Marinfloc's forward-thinking-design.
- Stainless steel material.
- Advanced HMI system with remote service and assistance, ensuring you're always connected and supported
