

WhiteBox®

Peace of mind with secure and monitored overboard discharge

Fail-safe discharge of bilge water

The Marinfloc WhiteBox® – a failsafe overboard discharge monitoring and control unit. Positioned between the oily water separator and the overboard valve, the WhiteBox® is developed with precision to prevent non-compliant bilge water discharge, ensuring your operations remain within regulatory bounds.

The WhiteBox® guarantees consistent monitoring of all vital discharge data and is seamlessly integrated with the vessel's GPS. This ensures that your operations are transparent and accountable with recorded data on oil content, valve settings and flow metrics.

Enjoy enhanced confidence in your discharge operations, safeguarding your crew and vessel from potential disputes. The digital recorder meticulously stores all critical data, from vessel position and time to door status, ensuring every detail is accurately logged for future reference.

Let the WhiteBox® bring peacefulness to your maritime operations, ensuring the highest standards of environmental compliance.

Key benefits

- Ensured compliance for bilge water discharge.
- Port state valve access without opening doors.
- MARS – Marinfloc Alert Report Support.
- Simple installation.
- Safe and easy to use.
- MESQAQ compliant.
- Risk management and peace of mind!
- Ocean Guardian interfaced to automatically closed in prohibited areas.
