Control

Empower Your IT Operations with Beta Control

Streamlined Automation & Monitoring Solutions by Beta Systems

Key Functionalities of Beta Control

Platform Access

- Web-based with responsive design
- Compatible with PCs and mobile devices

API Integration

- REST API functions for seamless integration into existing environments

Grouping and Customization

- Organize backend instances by specific categories (e.g., log management, workload management)
- Tailor dashboards and searches

Monitoring and Administration

- Displays statuses of print queues, jobs, agents, and services depending upon the connected backend
- Tracks and displays trends/statistics

Reports and Dashboards

- Export data (e.g., Excel, CSV, json, xml)
- Create custom dashboards with drill-down features

Control for LogZ

Control for CheckZ

Control for JobZ

Control for DocZ

Purpose

Supports print monitoring, definition of agents, reader information of agents of servers and analysis of checking procedures.

Product Highlights

User Experience

- Simplified navigation with mouse-over previews and click-to-drill functionality
- Customizable views and saved searches for regularly executed queries

Data Presentation

- Graphical overviews of presented data, for ex. Agents, systems, print statuses and data histories

Scalability

- Works across single or multiple backend installations with consistent UI

Authentication

- Different login methods, for example LDAP, AD, RACF

Who Benefits from Beta Control?

Operations and Helpdesk Teams

- Real-time monitoring and dashboards with auto-refresh

Administrators

- Maintenance tasks such as defining users and managing environments

IT Managers

- Reporting on system stability, trends, and volumes with data export capabilities
