Garancy@Cloud
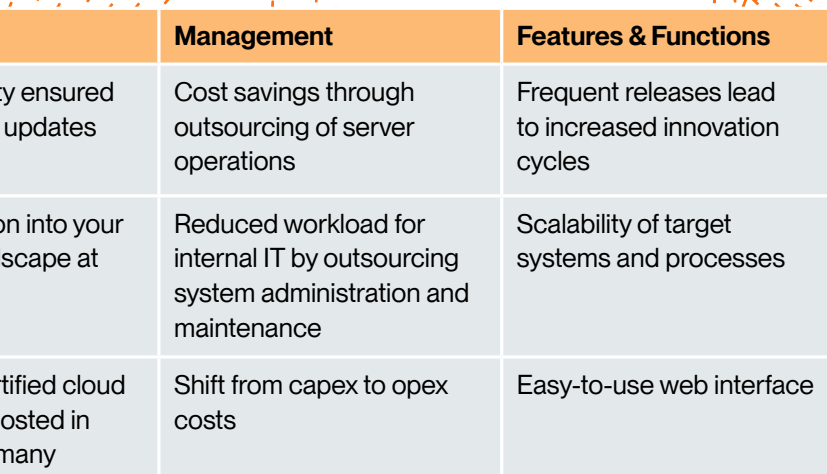

IAM as a Service

Secure and Efficient Identity and Access Management in the Cloud

Beta Systems' Garancy@Cloud offers a quick and easy way to deploy a preconfigured IAM solution in the cloud. Our experts take care of all steps required, from setting up the IAM software to deployment and implementation in your organization.

Identity Management That Fits Your Dynamic Company

- Adapt Garancy@Cloud flexibly to your company's growth.

- Benefit from minimal start-up time during implementation thanks to preconfigured standards and our professional success managers.

- Use proven and reliable components to establish your Identity Management efficiently and securely.

- Choose from a wide range of target systems, including Azure AD, ServiceNow and more. The target systems are connected during the deployment phase.

- Use a scalable connector framework with ready-to-use interfaces for standard applications and systems to quickly connect additional target systems.

Integration	Security	Management	Features & Functions
Stress-free implementation without major IT projects thanks to cloud technology	High IT security ensured by continuous updates	Cost savings through outsourcing of server operations	Frequent releases lead to increased innovation cycles
Predictable scope for the implementation thanks to extensive project experience	Easy integration into your IT system landscape at network level	Reduced workload for internal IT by outsourcing system administration and maintenance	Scalability of target systems and processes
Standardized setup and HR data import included	ISO 27001 certified cloud environment hosted in Frankfurt, Germany	Shift from capex to opex costs	Easy-to-use web interface

Full Control Over Your IT Landscape

- **User Center**
  With Joiner, Mover and Leaver processes, as well as simple self-service requests, you receive support throughout the entire employee lifecycle.

- **Recertification Center**
  With an easy-to-use web interface, you can set up custom recertification campaigns and have users from relevant departments manage the recertification of employees.

- **Process Center**
  The central component for managing and automating entitlement workflows and access recertification campaigns within your organization. Ensure a four eyes principle (or more) in compliance with internal policies and regulatory requirements.

- **Compliance Audits**
  Gain insights into the current state of your rights management or access historical data through customizable reports.

- **IAM-Administrator**
  As a System Center administrator, you have full access to the managed identities data.

- All data remains in your private AWS environment.

IAM Setup Service for Garancy@Cloud

The approach to implementing our cloud-based IAM solution follows a standardized project plan and established work packages. With our best-practice configuration, timely provision of resources and collaborative efforts, implementation can be completed in just a few weeks.

Does Your Company Have Special Requirements?

Do you need an IAM system that is precisely tailored to your company's needs, for example, to meet specific compliance requirements?

Garancy is also available as a managed service: hosted in the AWS cloud, with 24/7 monitoring and completely customized based on your organizational needs. Let's discuss your requirements – we will provide you with a free quote!
