

AgreenaCarbon Programme: Standard Terms and Conditions

Earn sustainable, financial growth from seed to sale.

The AgreenaCarbon programme supports farmers like you in shifting to more sustainable farming practices by authenticating emission reductions and removals from your field activities and creating verified, tradable CO₂e certificates.

You decide what to do with them:

You can keep them to offset your own emissions

We can sell them for you based on current market demand and prices

You can sell them yourself or bundle them with your products

How does the programme work?

There are no minimum requirements to join the AgreenaCarbon programme. Simply follow our best practices to maximise your sustainability and potential earnings ... but please do so at your own pace.

Each field you commit to the programme can be applied as a separate entity, meaning you can have multiple contracts active, but only one per field. You do not need to commit all your fields at once.

At the end of your harvest, AgreenaCarbon will verify the impact of your committed fields, net the total impact then issue certificates based on the aggregate amount of carbon removed or reduced. This method allows you to earn certificates on a net positive total impact even though you may have fields emitting additional greenhouse gases during some years.

AgreenaCarbon Premium Pool

The Premium Pool is designed to set aside a small portion of your total carbon earnings to cover any adverse events you may face in the field.

- We'll deposit 10% of your total certificate earnings during the first three years into your Premium Pool.
- Your Premium Pool will be steadily distributed to you by 20% each year beginning in the fifth year.
- Any remaining certificate earnings will be distributed at the end of the crediting period.

Learn more by reading the Premium Pool guide.

AgreenaCarbon Best Practices

We encourage you to begin implementing the following practices into your farming activities – at your own pace – to maximise your earning potential.

Learn more by reading the Best Practices guide.

Reduced soil disturbance

Optimal use of cover crops

Use of organic fertilisers

Optimal residue management

How our methodology is flexible according to changing standards and regulations

Our methodology calculates the current status of emissions for each of your fields. Each year, we track the improved practices as well as the corresponding removals and reductions from each practice. This means that if the agricultural regulations change for adoption of specific practices, so will our calculations.

For example:

If a new regulation says that all fields should be covered with cover crops, you will no longer receive certificates for the reduced emission from your cover crops. However, you will still receive certificates from your other climate farming practises.

Can I leave the programme whenever I want to?

You can leave the programme at any time. You will, however, forfeit your Premium Pool balance if you do. Learn more by reading the Premium Pool guide.

Summary in short:

1. The AgreenaCarbon programme rewards you for reducing emissions from your fields by disbursing verified, tradable CO₂e certificates that you can either keep or sell.
2. We'll set aside a small portion of your total carbon earnings to cover any adverse events you may face in the field.
3. Follow Agreena's best practices to maximise your earning potential.
4. You can leave the programme whenever you choose.

Fees

The pay-out depends on supply and demand. At the moment the prices of certificates are around €25 per certificate (per one tonne of reduced CO₂e), which may vary according to market conditions.

Monthly subscription

€100

You need to pay a monthly fee in order to access the platform.

Issuance fee

15% of certificates

15% of all verified certificates will be paid to AgreenaCarbon to cover verification and issuance costs.

Sales fee

15% of sales price

If you want us to sell your certificates for you, we will apply a 15% fee of the sales price.

It is important for you, us and the climate that the certificates are trustworthy. Therefore:

- You can only sell your emission once – no double claiming of the emission removal/reduction.
- You can only sell your certificate once – issued certificates will be retired upon selling and cannot be sold multiple times.
