HyCare

We drive your hygiene

HyCare

We drive your hygiene

What is HyCare?

With the HyCare-method, The Schippers Group supports livestock companies across the world to improve hygiene on their farm. Livestock companies who apply the HyCare method are improving the health of their animals and see their technical results increase.

HyCare in poultry farming

With HyCare we offer poultry-programs that focus on top hygiene management. Our method increases animal health and optimizes hygiene management. Besides the products, we also provide our customers with the right tools and guidance.

'Dalem'

On our HyCare demo farm 'Dalem' we are researching the effect of the HyCare-method on our animals. In addition we also monitor all technical results.

INTERESTING FACTS

- The HyCare demofarm 'Dalem' has been operating **since 2019**
- **85.000 chickens** divided over 4 stables
- Dalem is both a **demo and research center**
- The **HyCare Application Center (HAC)** is located here

RETURN ON INVESTMENT (ROI)

| Parameter | Financial difference |
|-----------------------------|----------------------|
| Technical results per chick | € 0,1097 |
| Extra results per chick | € 0,0321 |
| Results per chick | € 0,1418 |
| Investment per chick | € 0,0572 |
| Result per chick | € 0,0846 |
| Return on investment (ROI) | 248% |

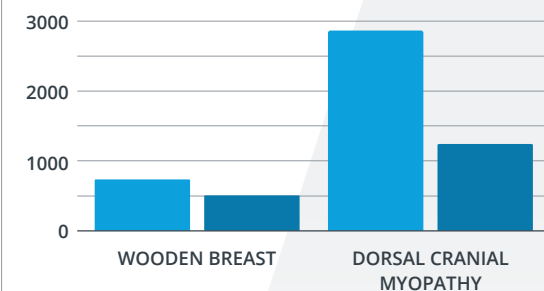

*Financial difference HyCare stable compared to reference stable

*Investment per chick is cost including coating, minus costs for regular disinfection and support

Future

We are working hard to reduce antibiotic use. At the moment the use of antibiotics in the HyCare stable is lower than the reference stable. Our goal is to have a working system in which the use of coccidiostats is no longer necessary in the coming years.

CULLING RATE

■ Reference stable
■ HyCare stable

Weight first shipment (33 days) +36 gram

Weight final shipment (42 days) +55 gram

Feed conversion -6 points

Antibiotics use -20%

*Difference HyCare stable compared to reference stable
