- Hard to reach areas requiring baseline mapping (country followed by district count): Central African Republic (9), DRC (16), Egypt (29), Somalia (2), Sudan (11), Yemen (36)
- Endemic population greater than total population due to different population sources

<sup>1</sup>Based on districts with a prevalence of trachomatous trichiasis (TT) unknown to the health system in ≥ 15-year-olds ≥ 0.2% (based on the correct definition of TT at the time of survey). A population growth rate based on 2024 UN data has been applied to case estimates only where district-level TF>= 5%. <sup>2</sup>For validated countries, evidence other than conventional statistical analysis of TT data was used where available. <sup>3</sup>Validation of elimination dossier as of July 2025.
