

Press Release

Ampyr Solar Europe opens its Gorgast solar park cluster in Brandenburg, Germany

London, October 16th , 2025

Ampyr Solar Europe (ASE) is proud to announce the opening of its Gorgast solar park cluster in Brandenburg, Germany. With a total capacity of 45 MWp, the project marks another milestone in ASE's mission to advance the energy transition in Europe.

The Gorgast solar park consists of PV installations on three sites, operating as a single plant; Gorgast Bahn, Gorgast Gewächshaus and Manschnow. The cluster delivers an installed capacity of 45 MWp, covers 40.6 hectares and comprises almost 75,000 solar panels. The entire Gorgast solar plant cluster generates enough clean electricity to power around 13,000 households and avoids approximately 22,000 tons of CO2 emissions each year.

A particular highlight of the project is the successful transformation of a previously unused brownfield site with a degraded landscape at Gorgast Gewächshaus into a productive and sustainable solar power facility. This development exemplifies AMPYR Solar Europe's focus and expertise in responsible land use and ecological renewal. The project included major investments in demolition work, the removal of unexploded ordnance, and extensive environmental and conservation measures. In addition, the local economy was actively engaged, and implementation was carried out in close cooperation with the municipality, underscoring AMPYR Solar Europe's commitment to partnership-based and sustainable regional development.

Tarun Agrawal, Ampyr Solar Europe's CEO stated: *"We are proud to contribute to Europe's continuing energy transition with the opening of the Gorgast PV cluster. The collaboration with our partners has been outstanding and serves as a model for future projects. The Gorgast project underscores our continuing commitment to developing renewable assets in Germany, where ASE now has a PV and BESS pipeline of over 3GW, part of an aggregate European pipeline of over 7GW across Germany, the Netherlands and the UK."*

About AMPYR Solar Europe

Headquartered in London, AMPYR Solar Europe (ASE) is an independent renewable asset developer and IPP active in Germany, the Netherlands and the UK. With a focus on solar and BESS, ASE has in-house end-to-end capability across Asset Development, Financing, Construction, Asset Operations and Power Sales. AMPYR Solar Europe benefits from a sponsor group including Singapore-

headquartered renewable developer AGP Sustainable Real Assets, and US-headquartered commodity trader Hartree Partners.
