Newbuild, refurbishment:

Internorm Sales Partner:

Photographer Details (Name, Address, Email – if professional pictures are included):

Please send supporting pictures (interior and exterior) and plans/drawings of the project, if available.

PROJECT INFORMATION

1. Project Description

2. Natural light and carefully planned sightlines are key design elements in architecture. How have natural lighting and views been used as design elements in the submitted project?

3. Were the windows and doors considered as a key design element of the façade? If so, how?

4. Sustainable, energy-efficient construction and healthy living: How does the submitted project support the well-being and health of the residents? Were issues such as optimised daylight and shading, sound insulation, privacy, fly screens, protection against extreme weather, resident safety or other measures that support the health or well-being of residents taken into account during the planning stage?

(Specify the energy performance indicator: heating demand (HWB) or primary energy demand (QP) – for renovation projects, please state the value before and after the renovation).
