

What is webPOISONCONTROL®?

The problem:

6,000 people call US poison centers for poison exposures daily.

But 4,000 to 9,000 more people per day with a possible poisoning *don't call* for help.

What's wrong with that?

Many people just guess whether an exposure is serious, or ask unreliable online sources. Not getting poison expert-verified information can result in:

Serious illness, or even death.

Unnecessary healthcare costs.

Frustration and wasted time.

Why aren't they calling a poison center?

I don't like talking on the phone.

I don't want my kids to hear and get scared.

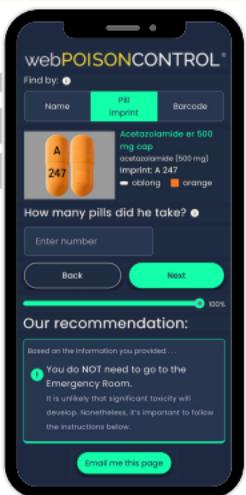

I'm embarrassed.

webPOISONCONTROL® provides free, fast, and accurate guidance for poison exposures, *online*.

Simple question & answer format.

Barcode scanning option for easy product identification

Personalized recommendations in under 3 minutes.

Written recommendations on screen & via email.

So next time...

that blue liquid wasn't sports drink.

your child thought those berries were grapes.

you took your medicine twice.

use webPOISONCONTROL® for fast, free, online help you can trust.

Try the tool online or download the free app on the App Store or Google Play.
