

KLAPP® High Chair

Commercial Use, Inspection & Maintenance

KLAPP® High Chairs used in commercial, hospitality, childcare, rental, institutional and other public environments are typically exposed to significantly higher levels of use than products used in private homes.

To help ensure continued safe operation, KAOS recommends regular inspection and maintenance of all chairs used in commercial settings.

Regular Inspection

Inspect all chairs regularly and check for:

- Loose screws or fittings
- Cracks, splits or damage
- Structural instability
- Excessive wear caused by frequent use
- Any other condition that may affect the safe use of the chair

Removal from Service

Any chair showing signs of damage, instability, excessive wear or reduced functionality should be removed from service immediately until repaired or replaced.

Maintenance

Follow the product care and maintenance instructions provided with the chair. Ensure that all components remain correctly assembled, secure and in good working condition.

Commercial Warranty

Products used in commercial, hospitality, childcare, rental, institutional or other public environments are covered by KAOS commercial warranty terms.
