

The Most Trusted Messaging Platform

FOR THE WORLD'S BANKS AND OTHER FINANCIAL INSTITUTIONS

BlackBerry Messenger Enterprise (BBMe) enables banks and other financial institutions to unleash the power of their people, through security, connectivity, and privacy. BBMe's secure messaging provides financial organizations the ability to leverage instant messaging, without risking data breaches or regulatory non-compliance.

BBMe is designed for governments and highly regulated financial institutions to securely stay connected through messaging, and conferencing. With extensive security and privacy for text, voice, video, group chat, conferencing, and file sharing, BBMe protects user identities, content, and devices at the highest standards.

When the conversations matter the most, they happen on BlackBerry Messenger Enterprise

To mitigate eavesdropping or manipulation, a FIPS 140-2 validated cryptographic key exchange is leveraged. Each message uses a new symmetric key for message encryption. Additionally, TLS encryption protects the connections between the device and BlackBerry's infrastructure, allowing employees to remain compliant with corporate, GDPR, HIPPA, and Securities Exchange Commission (SEC) regulatory mandates.

Messaging archiving and administration is available through the ultra-secure BlackBerry Unified Endpoint Manager (UEM) to further help meet compliance mandates.

BBMe empowers leaders and teams with faster communication and decision making. Our government-grade security is paired with a frictionless, easy to deploy, and consumer-like feature set which include:

Enhanced multi-media messaging and conferencing

-  Chat 1:1 via chat, voice, and video with trusted contacts inside and outside your organization
-  Communicate securely and reliably in real-time, during planned and unplanned events
-  Seamlessly transition chats to an encrypted voice or video call for urgent conversations
-  Confidentially share pictures, videos, voice notes, files, and BBMe contacts
-  Securely forward content from one secure chat to another
-  Provide immediate location share so contacts or a group can view real-time location for a dynamic amount of time that you select
-  Start multimedia conferences with easy access using URL or QR code

Communications Control

-  Enable your customers with BBMe access to facilitate their banking needs securely with compliance and ease.
-  Edit, retract, or set an expiry time on a single picture, message, or document
-  Know when a message has been screenshot.
-  Restrict who can add users to a group/edit a group.
-  Reference existing chat messages when sending a new message through quote messages and @mention group chat participants

Multi-Platform Support

Securely connect up to 5 devices simultaneously, on mobile or desktop, across Android™, iOS, Windows®, and macOS devices, with communications synchronized between all devices in real-time.
