

Safety is our responsibility

Rescue & Recovery Concepts

RETROFIT AND MODERNIZATION
Plant Safety

SAFETY IS TOP PRIORITY

Hot surfaces, combustible gases, electrical voltages and moving machine parts – heat treatment plants involve numerous risks. In particular during maintenance work or mal-functions inside the equipment, quick and appropriate action can be vital.

OUR SOLUTION: TAILOR-MADE RESCUE AND RECOVERY CONCEPTS

Drawing on our long-standing experience in heat treatment technology, we develop **customised rescue concepts and safety trainings** – precisely matched to your type of plant and your on-site conditions:

COMPLIANT WITH STANDARDS & CE

Our safety concepts meet the following key requirements:

- Machinery Directive 2006/42/EC
- German Ordinance on Industrial Safety and Health (BetrSichV)

In addition, we follow the safety standards of **ISO 13577 (Safety of industrial thermo-processing equipment)** – the international standard for **CE-compliant design and modernisation of industrial furnaces** – as well as all applicable **local and national regulations**.

This ensures that retrofits and modernisations are legally compliant, practical and state-of-the-art.

Our expertise in heat treatment technology makes us your reliable partner for protecting people and plant.

**Safety is not just about technology,
Safety is our responsibility.**
