

Improved Process Reliability for AICHELIN Pusher Furnaces

Position detection on the cross pusher

REBUILDING AND MODERNIZATION
Process reliability

POSITION DETECTION OF THE CROSS PUSHER

- Current position of the cross pusher cannot be detected in manual operation or during maintenance work.
- Position detection on the cross pusher available as retrofit kit:
 - Constant visibility of the cross pusher position
 - Avoidance of operating errors in manual operation
 - Simplified operation during maintenance work through permanent visibility of the cross pusher position

THE AICHELIN SOLUTION: POSITION DISPLAY DIRECTLY ON THE DRIVE

- Current position of the cross pusher always on display on the drive

YOUR ADVANTAGES

- Permanent visibility of the drive position
- Avoidance of operational error due to unknown position
- Simplified manual operation
- Advantages to maintenance work and saves time

YOUR RELIABLE PARTNER

- Competent engineering partner
- Reliable supplier of components
- High level of expertise in plant modernization
- Experienced partner
- Perfect integration into your AICHELIN pusher plant with documentation and warranty.
