Hydrodamp: Vibration damper extends the service life of commercial vehicles in agriculture and construction

2026-06-09

- Highly elastic Hydrodamp vibration dampers from Driventic reduce vibrations and protect drivetrains in commercial vehicles for enhanced comfort and longer operation.
- Close cooperation with manufacturers and comprehensive service ensure efficiency, reliability, and economy in daily use.
- Driventic combines efficient conventional systems with sustainable drive concepts.

HEIDENHEIM, GERMANY. Actively shape and advance mobility with innovative drive solutions – this is what Driventic strives to do every day. As an independent company originating from parts of the drive systems division of the technology group Voith, Driventic has positioned itself as a specialist for efficient drive systems in the commercial vehicle sector. Focus is on continuous technological advancements, practice-oriented innovations, and close partnership-based cooperation with manufacturers and operators.

Protection, efficiency, and comfort in the drivetrain

The robust and powerful drive solutions for tractors and construction machines especially reflect the unique combination of an openness to technologies, many years of system expertise, and consistent alignment with the respective applications. With today's high-torque, fuel-efficient engines, drivetrains have to withstand a lot more than they did before. For ensuring vehicle economy and availability in this environment, Driventic recommends the highly elastic vibration damper series Hydrodamp.

Every Hydrodamp design efficiently damps the vibrations generated by cyclic irregularities in the engine. By doing so, it makes an important contribution to protecting the drivetrain from overload. At the same time, the reduced vibrations help extend the service life of the individual components and the entire vehicle. In addition, the decrease in engine noise noticeably enhances the comfort for the vehicle operator.

Wide range of products and individualized solutions

Driventic offers different variants of its highly elastic vibration dampers for different engine torques – from compact agricultural machines with up to

400 Nm to special-purpose high-performance vehicles with up to 3,700 Nm. The broad portfolio also includes Hydrodamp vibration dampers designed especially to meet the requirements of hybrid drives.

On request, Driventic can adapt each damping and suspension characteristic individually to customer-specific requirements and application areas. As a result, the Hydrodamp vibration dampers provide for even greater comfort and vehicle economy – completely in keeping with the Driventic brand promise: “Mobility beyond today.”

Dual strategy for future-proof products and technologies

The basis for this is a consistently customer- and future-oriented product portfolio, supplemented by a worldwide service and location network. All Driventic solutions are systematically tailored to the respective application requirements – and always with efficiency, reliability, and economy in daily use in mind.

Driventic pursues a dual strategy in parallel with the further development of electric drive concepts: “We are strategically strengthening existing conventional technologies and further expanding our market position here, while at the same time developing new, sustainable electric solutions,” stresses Dr. Gregor Wiche, CEO of Driventic. This gives manufacturers and operators for truck, bus, and off-highway applications the necessary flexibility to select the most appropriate technology for different application conditions.

By effectively damping engine imbalance vibrations, highly elastic Hydrodamp vibration dampers such as the Hydrodamp 365 AG protect the drivetrains of tractors and construction machines from overload. This improves vehicle economy and availability.

About Driventic

Driventic is the specialist for efficient drive technologies in commercial vehicles. Whether for use in e-mobility or conventional drives, Driventic's complete systems and digital services are drivers of the mobility transition – because they enable manufacturers and operators alike to sustainably

operate their trucks, buses and off-highway vehicles. The company's 1,400 employees at 26 locations in 18 countries are dedicated to one mission: to combine ecology with technological progress in the service of efficiency.

This is what Driventec understands by 'Mobility beyond today'.

Driventec has been on the market since November 1, 2025. The company, which is based in Heidenheim, Germany, is a spin-off of parts of the drive systems division of international technology group Voith. All Driventec's products, systems and digital services are technological refinements and advancements of Voith solutions.
