

Chip Competence Centre in the EU.

# CASIMIR INSTITUTE

Future Chips and High-Tech Systems

Accelerating sustainable chips  
and high-tech systems innovation  
from research to impact.

Peter-Jan Hendriks – Institute Program Manager High Tech Equipment

# Casimir Institute: Our research focus explained

## RESEARCH FOCUS

### Future Chips

Accelerate innovations in chip design and fabrication to enable digital transformation.

### High-Tech Systems

Enable extreme functionalities and performance for future high-tech systems.

## RESEARCH DOMAINS

### Next-Gen Chips

Heterogeneous integration of our expertise in electronics and photonics.

### Materials and Processes

Specialized in atomic-scale processing, including nanolayer preparation and patterning.

### High-Tech Equipment

Advance productivity, accuracy, and efficiency via our expertise in mechatronics, control & methodologies.

### Foundational Technologies

Merge insights from mathematics, physics, AI, computer science, and data science.

# The Dutch Semicon Eco-System.

# The Dutch high-tech history

Share innovation. Shape tomorrow.

- Many global players and champions
- Semiconductor IC is almost 65 years old
- Even today: no single company masters all steps necessary to design, package, produce and test a complete device
- 1 chip? 60 countries & 800 process steps

**We have a long history of innovations...**

| Innovation                   | Year |
|------------------------------|------|
| Microscope                   | 1590 |
| Crankshaft                   | 1594 |
| First submarine              | 1620 |
| First electric vehicle       | 1835 |
| Electrocardiography (ECG)    | 1903 |
| Artificial kidney            | 1943 |
| Automatic transmission (CVT) | 1958 |
| Compact disc                 | 1979 |
| Wifi                         | 1991 |
| Bluetooth                    | 1994 |
| Tom Tom navigation           | 2004 |

**Collaboration is not a choice... it's a must!**

# Key figures semiconductors in NL

Share innovation. Shape tomorrow.

- 430+ companies within a range of 200 kilometers (or 124 miles)
  - ✓ Within NL 168,000 employees
  - ✓ Globally 85,000 employees (and families)
- 75% Dutch owned – 25% foreign owned (mainly USA and Germany based)
- 2024 global sales revenue € 61+ billion (4.6 % of Gross National Product)
- 85% of all chips manufactured makes use of 'Made in NL' equipment
- Big 5 (ASML, ASM, Besi, NXP, Nexperia) account for €45 billion in revenue; €6.8 billion in R&D; 96,000 FTEs
- ASML, ASM, Besi, and NXP are the main drivers.
- We have many world leaders, mainly in design & manufacturing of equipment (33% global market share):
  - ✓ Front and back-end machines
  - ✓ RF and radar technology
  - ✓ Chip Design
  - ✓ Metrology
  - ✓ Test Technology & Engineering
  - ✓ Photonics

## Europe's largest tech companies

| Valuation or market capitalization |  |          |        |
|------------------------------------|--|----------|--------|
| 1                                  |  | ASML     | \$549B |
| 2                                  |  | SAP      | \$225B |
| 3                                  |  | arm      | \$132B |
| 4                                  |  | prosus   | \$106B |
| 5                                  |  | Spotify  | \$104B |
| 6                                  |  | Revolut  | \$75B  |
| 7                                  |  | Infineon | \$67B  |
| 8                                  |  | NXP      | \$57B  |
| 9                                  |  | NOKIA    | \$45B  |
| 10                                 |  | ASM      | \$40B  |

Data as of 06 Apr 2026. Access more at [multiples.vc](https://multiples.vc)

# Semiconductors in the Netherlands

Share innovation. Shape tomorrow.

- Ecosystem visualisations are generally made by positioning all stakeholders in that ecosystem against a background of a geographical map or in a value chain representation.
- An insight into the geographical distribution of activities may be a helpful instrument for policy makers

\* Graphic based on High Tech NL member data | Version October 2025

\*\* For modelling purposes, semiconductor companies are grouped by FTE size. This approach does not fully capture ASML's scale but ensures comparability across the sector.

Chip Competence Centre in the EU.

# Chip Act 1.0 - Chip Competence Centre in EU

Together, we ensure a flourishing Dutch sector within a strong European industry.

**Chip CC- National hubs in EU,**  
Connecting: Industry &  
startup/scale-ups

- To funding
- Technical support
- Supply chain support
- Talent

# EU Chips Act 1.0: Chips for Europe Initiative

Chips are the driving force behind all major economic, ecological, and societal transitions.

Goal: Reinforce Europe's technological leadership by:

- Facilitating the transfer of knowledge from the lab to the fab
- Bridging the gap between research, innovation and industrial activities
- By promoting the commercialization of innovative technologies by EU-industry including start-ups and SMEs
- Open doors to new markets and opportunities.

## Research

## Industries (With national interest)

# FiCCC provides a full turnkey service model

## Service palette that complements the needs of Finnish chip companies

### Strong in tech

-  Chip design expert advisory
-  System design expert advisory
-  Fabrication roadmap - from PoC to piloting

### Supporting business success

-  Partner Matching & Collaboration
-  Access to funding and European opportunities
-  Deep tech entrepreneurship and business development
-  Talent support & Training for biz skill

# FiCCC - When one door closes, we open the next one

An easy contact point – access all Finnish & EU semiconductor–photonics resources

Flexible: from quick advice to long-term project building and support

# AT-C<sup>3</sup>

Austrian Chips  
Competence Center

## Intro AT-C3

Borislav Hinkov

Co-funded by  
the European Union

The project is supported by the Chips  
JU and its members including top-up  
funding by the FFG.

**FFG**  
Promoting Innovation.

**NATIONALSTIFTUNG**  
FORSCHUNG | TECHNOLOGIE | ENTWICKLUNG

# Austrian Chips Competence Center AT-C<sup>3</sup>

## Austria's Center for Chips Competences, Design & Pilot Line Access

### Starting Date

- 1<sup>st</sup> of January 2025

### Focus on four mayor pillars:

- Funding scheme for Start-ups/SMEs
- Skills & Training Courses
- Ecosystem support/build up in Austria
- European Network Access incl. Specialization

### “One-Stop-Shop” for Chips Competences in Austria

- ... along the Electronics & Software-Based Systems value chain
- for companies
- for research organizations
- focus on start-ups and SMEs

# AT-C<sup>3</sup> Objectives and Technologies & Skills Areas

## Our Objectives

- Expand Austrians ESBS site & grow the European ecosystem
- Promote disruptive innovation & support high impact projects
- Enable Austrian companies to accelerate their development significantly
- Provide fabless companies with access to European foundry services
- Expand chips competences through skills training activities

# AT-C<sup>3</sup> Services

## We offer FUNDING

- Accessible for Austrian SMEs and Start-ups
- Up to **80% funding** through ESTP projects covering:
  - Materials & Process Innovation  
*Sustainable synthesis, lifetime prediction, and performance optimization*
  - Chip Design & System Integration  
*Consulting and supporting in chip and package design incl. electromagnetic compatibility and electrostatic discharge*
  - Semiconductor Manufacturing  
*Consulting and support in prototype manufacturing incl. redesign, assembly and test*

## We provide ACCESS

- Support in accessing the European Chip Design Platform
- Support in accessing the EU Pilot Lines
- Support in accessing Open Access EU Foundries

## We provide FREE SERVICES

- Fully funded Skills & Training Programs starting from 2026
- Provision of financial expertise
- Access to EU Chips Fund
- Support in company valuations or co-investments, among other services

Co-funded by  
the European Union

The project is supported by the  
Chips JU and its members  
including top-up funding  
by the FFG.

ChipNL Competence Centre.

Building on a holistic semiconductor value chain

CCCNL consortium is a  
collaboration between key  
regions, building on a  
strong heritage

[www.cccnl.nl](http://www.cccnl.nl)

in

# We guide to capitalize on opportunities both nationally and internationally

## The Netherlands have a leading role in

- **Equipment** (~85% of workforce): photolithography (ASML), atomic layer deposition (ASM), metrology (ASML & Nearfield)
- **IDMs/Electronics** (~5% of workforce): electronics (NXP), high-volume chip production (Nexperia), RF manufacturing (Ampleon)
- **Photonics** (~2% of workforce): from design to small scale production, assembly, testing and packaging

## Value chain ecosystem of 300+ smaller companies

- A cluster of OEMs and suppliers such as VDL, Prodrive, Neways, NTS
- Knowledge institutes and talent development (TNO, IMEC, Holst, TU/e, UT, TU Delft)
- Promising start-ups (Axelara AI) and incubator vehicles (HighTech XL)
- Strong industry associations (HighTech NL, Chiptech Twente, etc)

# ChipNLCC focuses on four key areas of expertise

## Semicon Manufacturing Equipment

Technology for chip production such as lithography, etching and metrology, with Dutch leaders like ASML and ASM

## Chip Design

The design of integrated circuits for applications in fields such as automotive and medical technology

## Heterogeneous Integration

The combination of different semiconductor components into powerful, compact systems for AI, 5G and medical devices

## Photonics and Quantum Technology

Chips that use light for data processing, with applications in ultra-fast communication and advanced sensor technologies

# Chip CC Services

# Together, we strengthen the position of Europe in the global semiconductor market

## Services offered by ChipNL Competence Centre

- **Supply Chain & Technology**
  - Support for product development, testing and production
- **Business Growth & Funding**
  - Guidance on investment opportunities and growth-related funding programs
- **Talent & Skills**
  - Access to specialized training, education and matchmaking with industry
- **Promotion & Internationalisation**
  - Boosting visibility and expansion within the European network

# We guide on opportunities nationally and internationally.

## Promising innovations require infrastructure and facilities that are accessible to SMEs

ChipNL Competence Centre offers services to gain access to infrastructure such as cleanrooms, pilot lines, and shared testing facilities in the Netherlands and beyond.

- Referral to pilot lines
- Referral to EU Chips Design Platform and Competence Centres
- Referral to third parties and solution providers

# ChipNL Competence Centre – Third parties

1. **Chip design for both** electronics (IMEC IC-link) and photonics (Epiphany)
2. **Foundries & cleanrooms** various fabrication technology platforms
  - Only country in Europe with advanced doping technology (Aluvia)
  - Only independent pure-play MEMS foundry in Europe (XIVER)
  - Access to TSMC manufacturing via VC aggregator (IMEC IC-link)
3. **Testing** capability for high-volume testing (Salland)
4. **Packaging** capability for high-volume photonics (Phix) and electronics packaging (Neways)
5. **Machining manufacturer** from metrology (NIF), lithography (SCIL) to thin-film deposition (DEMCON)

## Example of Key Capabilities along Customer Journey

# Access to European Pilot Lines

## FAMES (Fully Depleted SOI Applications)

Coordinator: CEA-Leti, France

Focus: Development of low-power, fully depleted silicon-on-insulator (FD-SOI) technologies

Applications: Targets non-volatile memories, RF, and 3D integration

Goal: Enable energy-efficient, scalable chip solutions for next-gen electronics

## nanoIC (Nanoelectronics IC)

Coordinator: imec, Belgium

Focus: Sub-2nm and beyond front-end-of-line chip manufacturing

Applications: High-performance computing, AI, mobility, energy, and healthcare

Goal: Bridge the gap between research and production for ultra-advanced nodes

## APECS (Advanced Packaging and Heterogeneous Integration)

Coordinator: Fraunhofer-Gesellschaft, Germany

Focus: Chiplet integration, 3D packaging, and heterogeneous system design

Applications: AI, IoT, quantum tech, and secure electronics

Goal: Provide open-access prototyping, testing, and packaging services for startups and SMEs

## WBG (Wide Band Gap Materials)

Coordinator: CNR, Italy

Focus: Development of wide band gap semiconductors like SiC and GaN

Applications: Power electronics, electric vehicles, renewable energy systems

Goal: Improve efficiency, thermal performance, and power density in next-gen devices

## Photonics and Quantum Photonics

**Uniqueness:** an open-access European platform that facilitates the development and industrialization of photonic integrated circuits (PIC). JePPIX operates under an open-access framework, enabling the development of photonics solutions

### Advantages:

- Brokerage services for prototyping such as MPWs of PICs in different technology platforms (InP, SiN, membrane)
- Brings together the European PIC supply chain

#### Multi-Project Wafer services

Low-cost PIC prototyping

#### Pilot Line services

Bridging the gap from PIC prototype to production

#### Training services

PIC courses for academics and industry professionals

## CHIP DESIGN JOURNEY

# TNO Quantum Sensing Testbed

**Uniqueness:** an open-access testbed facility to accelerate the development and market adoption of quantum sensors. It focuses on sensors based on nitrogen vacancy centers in diamond, enabling detection of magnetic fields, currents, rotation, and temperature

[www.tno.nl/en/technology-science/facilities/quantum-sensing/](http://www.tno.nl/en/technology-science/facilities/quantum-sensing/)

# TNO Quantum Application Lab

**Uniqueness:** a public-private R&D initiative to help companies to develop applications of quantum computing. Companies assess the real-world potential of quantum technologies. Companies reduce investment risks. The Lab covers sectors such as aerospace, energy, agriculture, healthcare, and finance

[www.tno.nl/en/technology-science/facilities/quantum-application-lab-gal/](http://www.tno.nl/en/technology-science/facilities/quantum-application-lab-gal/)

# ChipNL CC as spider in the Dutch semiconweb

- Translates Dutch semiconductor talent best practices to EU and back
- Central hub for national semiconductor coordination
- Collaborates with regional initiatives for maximum impact
- Fulfilling a brokerage role between industry and education and training institutions
- Development of a Skills Development Platform
- Talent Attraction and Retention Programme
- Capitalising on synergies with other Talent and Skills initiatives

# Regional Funding opportunities

## **Equity**

VC funds (incl. ROM funds)

National VCs

Private equity

## **Loans**

Banks

Oost NL funds, bv Vroege Fase Financiering

High Tech Fund (Utwente)

## **Grants**
